Barbosa, Mario Inostroza, Jay-Shake Li, James A. Ainge, 2023-06-01 Animals show a natural tendency to explore novel as opposed to familiar stimuli suggesting an underlying memory process in regard to previously encoded information Dependent on this tendency spontaneous object exploration paradigms have been developed in animals to measure memory processes regarding what an object is where an object is located when an object is present the association of an object and its location in which context an object is shown and an episodic context of the combined what where when components These paradigms feature in the absence of extensive training and reward or aversive incentives analogous to incidental encoding of daily memory The application of these object exploration tests is broad and covers many fields such as behavioral neuroscience psychopharmacology and the neurobiology of recognition memory across species The medial prefrontal cortex parietal cortex and medial temporal lobe the hippocampus entorhinal cortex perirhinal cortex and parahippocampal cortex are the main neuroanatomical structures that are considered to underlie recognition memory However the retrosplenial cortex insular cortex anterior thalamus nucleus reuniens of thalamus striatum and amygdala are also considered to play a part As well recent findings also indicate that the lateral hypothalamus interpeduncular nucleus and cerebellum contribute to recognition memory under certain conditions Neurotransmitter systems actively mediate and orchestrate the neuronal communication between these structures during the processing of learning and memory An entire picture of the neuroanatomy and neurobiology of recognition memory will however require multidisciplinary approaches of imaging lesion pharmacology optogenetics chemogenetics and behavioral studies Recognition memory deficits are also major symptoms in multiple neuropsychiatric and neurodegenerative disorders such as schizophrenia attention deficit hyperactivity disorder depressive disorder bipolar disorder autism spectrum disorder Parkinson s disease dementia and Alzheimer s disease Although the etiology of the shared memory deficits is not fully understood it may be associated with environmental pharmacological and genetic factors that are commonly exposed to these disorders Spontaneous object exploration paradigms with minimal involvement of emotional valences are appropriate in the study of neuropsychiatric and neurodegenerative disorders as these disorders may sensitize one to emotional stimuli leading to a deficit in recognition memory Given the impact of these disorders and their memory deficits on our society there is a strong need to understand

the underlying mechanisms and development of innovative pharmaceuticals and gene therapeutics

history and modernity gender and sexuality culture epistemology globalization and change and continuity in Africa This book was originally published as a special issue of the Journal of Contemporary African Studies Food and Place Pascale Joassart-Marcelli, Fernando J. Bosco, 2017-12-22 This text provides a comprehensive and critical exploration of food from the unique perspective of place It shows that our experiences with food are deeply influenced by their cultural social economic and political contexts The authors explore a wide range of questions such as Do GMOs threaten rural livelihoods Why don't we eat dogs Does your neighborhood make you fat Do community gardens encourage urban gentrification Can cheese save a local economy Why are gourmet burgers appearing on menus all over the world How do immigrants use food to create a sense of place Does mainstream nutrition stigmatize bodies Is the kitchen an oppressive place Can celebrity chefs change the food system Critically engaged and connected to current activist and academic debates Food and Place will be an essential resource for students across the social sciences Moving Between Identities Marcia Bonato Warren, 2025-03-21 This trauma informed approach to counselling and bodywork explores the ways in which varying facets of identity and culture manifest in the body allowing a much more nuanced person centred approach to client care Marcia Bonato Warren MA MA LPC describes how our bodies interpret our identities often informed by cultural norms communication styles trauma and systems of power and oppression Therapists and bodyworkers reading this book will have the opportunity to engage personally and professionally learning to build on their own somatic awareness in order to engage with compassionate curiosity rather than resistance when confronted with identity based differences Each section uses the SIA Loop a mechanism representing three entry points we use to process information Sensation Interpretation Action which supports the deeper work offered by the Identity Expression Infinity Loop where identities are invited to move with strength and skill These pioneering tools allow readers to examine their own somatic experiences beliefs behaviours and choices all of which is supplemented with journal prompts and questions In guiding readers in how to interpret the body's expression of identity this unique guide maximises the potential of therapists to foster change increase empathy and nurture connection through trauma informed somatically aware bodywork **The Ashgate Research Companion to Political Leadership** Mikhail A. Molchanov, 2016-03-23 Discussing the major theories of political leadership with a focus on contemporary challenges that political leaders face worldwide this research companion provides a comprehensive and up to date resource for an international readership The editors combine empirical and normative approaches to emphasize the centrality of political culture as well as the limits of culture and the universal demands of innovative adaptation The volume examines *Women's empowerment for sustainable rural livelihoods: Akua Opokua Britwum, Angela Dziejdom Akorsu, Loretta Baidoo*, 2019-01-15 Agricultural interventions are designed on certain assumptions of empowerment that do not necessarily address the livelihood constraints of the rural women they set out to support This is a failing that might be due to the omission of women's voices expressing their understanding of empowerment and its relation to existing gender orders Using primary data from

the Upper East and Northern Regions in Ghana we explored women and men's notions of the processes and outcomes of empowerment. We began by understanding the basis of women's disempowerment and confirmed its location within agricultural production relations that granted women limited access to resources. Respondents recognised all the main dimensions of power within with to and over. The restrictions of women's empowerment to the provisioning role on condition that it did not usurp male power over women limited intervention's ability to provide true empowerment for women. But signs of increasing transfer of women's power within into group action and male acceptance of women's expanding spheres of influence indicate that some grounds for true transformation in the future exist. **Social Psychology** Karen A. Hegtvedt, Cathryn Johnson, 2017-07-12

Social Psychology Individuals Interaction and Inequality invites you to take a sociological approach to the study of the individual in relationship to society. This unique new text explains how social psychology provides varied yet interrelated explanations for individuals' experiences in groups and how the micro level interactions of individuals have consequences for macro level phenomena within society. Karen A. Hegtvedt and Cathryn Johnson describe an array of processes that shape interaction given differences in status, power or group memberships. Unlike other social psychology texts, theirs stresses the interconnections among these processes to create a story about how individuals perceive and then act in their social worlds. In addition to introducing the central theoretical approaches and important empirical studies, the authors also provide many examples that help students locate the substance of social psychology in their own experiences and social interactions. In the end, readers will gain an understanding of how their identities and perceptions shape what they do, how the structures in which they are embedded may constrain or facilitate their behaviors, and how these dynamics contribute to reinforcing or ameliorating inequalities in their social groups.

Energy Poverty, Practice, and Policy Catherine Butler, 2022-07-15 This Open Access book examines the implications of welfare policy for energy poverty and engages with key conceptual debates at the forefront of energy demand research. Academic work on energy poverty has rarely been brought into conversation with practice theory based approaches to energy use and sustainability. This book reveals how novel insights can be made visible through combining these different ways of thinking about energy demand issues. It presents a distinctive approach to energy poverty that places inequalities at the heart of debates about the advancing energy intensity of contemporary societies. *Digital Activism in Zimbabwe* Tenford Chitanana, 2024-10-21 This book investigates the role of the internet and social media in political processes in non-western and non-democratic contexts. Using Zimbabwe as a case study, the book demonstrates how activists and ordinary people deploy social media, particularly Facebook, to subvert an enduring hegemonic state. However, the book also highlights how authoritarian regimes are in turn learning and adapting to the information age, challenging the impact of digital activism. Studies of digital activism in the Global South are often centred around democracy, but this book paints a more complex picture, examining the role and effect of digital activism in challenging state hegemony in authoritarian contexts. The book

notes that while communication technologies help mediate activism they are also simultaneously constrained by pre existing and emergent challenges tied to the social and political context and the inherent limitations of those technologies The book investigates the tactics used by digital activists the contextual factors and restrictive political environment they operate in including the role of pro government activists and ultimately the impact of digital activism given these constraints From the case of Zimbabwe the book builds out a broader theoretical analysis of the evolution of third world protest in the digital age examining the limitations of activists actions and the ideological deficit in online activism to ferment a virulent counter hegemony
