Explosion Source Phenomenology American Geophysical Union Geophysical Monograph 65 1991:

Explosion Source Phenomenology Steven R. Taylor, Howard J. Patton, Paul G. Richards, 1991-01-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 65 In March 1989 the Department of Energy DOE and the Lawrence Livermore National Laboratory LLNL sponsored a symposium on Explosion Source Phenomenology at Lake Tahoe California The purpose was to summarize the state of knowledge of the underground explosion source based on U S experience at the Nevada Test Site NTS Specifically the goals were to summarize knowledge of the explosion source to identify limits of that knowledge and existing problems and to propose directions of future research and data collection efforts

Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Source Processes and Explosion Yield Estimation Goran Ekstrom, Marvin Denny, John R. Murphy, 2012-12-06 Pure appl geophys by 161 nations Entry of the treaty into force however is still uncertain since it requires ratification by all 44 nations that have some nuclear capability and as of 15 June 2001 only 31 of those nations have done so Although entry of the CTBT into force is still uncertain seismologists and scientists in related fields such as radionuclides have proceeded with new research on issues relevant to monitoring compliance with it Results of much of that research may be used by the International Monitoring System headquartered in Vienna and by several national centers and individual institutions to monitor compliance with the CTBT New issues associated with CTBT monitoring in the 21st century have presented scientists with many new challenges They must be able to effectively monitor compliance by several countries that have not previously been nuclear powers Effective monitoring requires that we be able to detect and locate much smaller nuclear events than ever before and to distinguish them from small earthquakes and other types of explosions We must have those capabilities in regions that are seismically active and geologically complex and where seismic waves might not propagate efficiently

Monitoring a Comprehensive Test Ban Treaty Eystein S. Husebye, Anton M. Dainty, 2012-12-06 An international treaty banning the testing of any nuclear device in any environment a comprehensive test ban treaty CTBT has been on the political agenda for nearly 40 years Objections to a CTBT have been political technical or a combination of both However the possibilities seem better after the end of the Cold War In the prevailing cooperative disarmament climate a CTBT appears likely to be approved by most countries in 1996 Hence the great current interest in monitoring technologies and capabilities Such issues are comprehensively addressed here a preamble being devoted to the political developments and setbacks over the past 40 years Since seismic means are considered the dominant monitoring element they are explored in detail Contributions cover network deployments advanced signal processing wave propagation in heterogeneous media and seismic source representations and a variety of techniques for source classification including neural networks Complementary monitoring techniques such as hydroacoustics radionuclides and infrasound are also summarised The IAEA operation for monitoring compliance with the Non Proliferation Treaty is also presented The book also includes eyewitness accounts of the Soviet 50

Mt megabomb development and test as well as the efforts made by the state to monitor the nuclear test programmes of the western powers Includes some 33 articles written by distinguished scientists active in CTBT monitoring research for decades

The Comprehensive Nuclear Test Ban Treaty National Research Council,Policy and Global Affairs,Committee on Reviewing and Updating Technical Issues Related to the Comprehensive Nuclear Test Ban Treaty,2012-04-29 This report reviews and updates the 2002 National Research Council report Technical Issues Related to the Comprehensive Nuclear Test Ban Treaty CTBT This report also assesses various topics including the plans to maintain the safety and reliability of the U S nuclear stockpile without nuclear explosion testing the U S capability to detect locate and identify nuclear explosions commitments necessary to sustain the stockpile and the U S and international monitoring systems and potential technical advances countries could achieve through evasive testing and unconstrained testing Sustaining these technical capabilities will require action by the National Nuclear Security Administration with the support of others on a strong scientific and engineering base maintained through a continuing dynamic of experiments linked with analysis a vigorous surveillance program adequate ratio of performance margins to uncertainties This report also emphasizes the use of modernized production facilities and a competent and capable workforce with a broad base of nuclear security expertise **Hysteresis**
