Genetic Programming and Data Structures W.B. Langdon,1998-04-30 Computers that program themselves has long been an aim of computer scientists Recently genetic programming GP has started to show its promise by automatically evolving programs Indeed in a small number of problems GP has evolved programs whose performance is similar to or even slightly better than that of programs written by people The main thrust of GP has been to automatically create functions While these can be of great use they contain no memory and relatively little work has addressed automatic creation of program code including stored data This issue is the main focus of Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming This book is motivated by the observation from software engineering that data abstraction e g via abstract data types is essential in programs created by human programmers This book shows that abstract data types can be similarly beneficial to the automatic production of programs using GP Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming shows how abstract data types stacks queues and lists can be evolved using genetic programming demonstrates how GP can evolve general programs which solve the nested brackets problem recognises a Dyck context free language and implements a simple four function calculator In these cases an appropriate data structure is beneficial compared to simple indexed memory This book also includes a survey of GP with a critical review of experiments with evolving memory and reports investigations of real world electrical network maintenance scheduling problems that demonstrate that Genetic Algorithms can find low cost viable solutions to such problems Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming should be of direct interest to computer scientists doing research on genetic programming genetic algorithms data structures and artificial intelligence In addition this book will be of interest to practitioners working in all of these areas and to those interested in automatic programming   **Genetic Programming and Data Structures** William B. Langdon,2012-12-06 Computers that program themselves has long been an aim of computer scientists Recently genetic programming GP has started to show its promise by automatically evolving programs Indeed in a small number of problems GP has evolved programs whose performance is similar to or even slightly better than that of programs written by people The main thrust of GP has been to automatically create functions While these can be of great use they contain no memory and relatively little work has addressed automatic creation of program code including stored data This issue is the main focus of Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming This book is motivated by the observation from software engineering that data abstraction e g via abstract data types is essential in programs created by human programmers This book shows that abstract data types can be similarly beneficial to the automatic production of programs using GP Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming shows how abstract data types stacks queues and lists can be evolved using genetic programming

demonstrates how GP can evolve general programs which solve the nested brackets problem recognises a Dyck context free language and implements a simple four function calculator In these cases an appropriate data structure is beneficial compared to simple indexed memory This book also includes a survey of GP with a critical review of experiments with evolving memory and reports investigations of real world electrical network maintenance scheduling problems that demonstrate that Genetic Algorithms can find low cost viable solutions to such problems Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming should be of direct interest to computer scientists doing research on genetic programming genetic algorithms data structures and artificial intelligence In addition this book will be of interest to practitioners working in all of these areas and to those interested in automatic programming *Genetic Programming and Data Structures* W.B. inventions And as other areas in Computer Science GP continues evolving quickly with new ideas techniques and applications being constantly proposed The purpose of this book is to show recent advances in the field of GP both the development of new theoretical approaches and the emergence of applications that have successfully solved different real world problems The volume is primarily aimed at postgraduates researchers and academics although it is hoped that it may be useful to undergraduates who wish to learn about the leading techniques in GP   *Data Mining Using Grammar Based Genetic Programming and Applications* Man Leung Wong,Kwong Sak Leung,2005-12-02 Data mining involves the non trivial extraction of implicit previously unknown and potentially useful information from databases Genetic Programming GP and Inductive Logic Programming ILP are two of the approaches for data mining This book first sets the necessary backgrounds for the reader including an overview of data mining evolutionary algorithms and inductive logic programming It then describes a framework called GGP Generic Genetic Programming that integrates GP and ILP based on a formalism of logic grammars The formalism is powerful enough to represent context sensitive information and domain dependent knowledge This knowledge can be used to accelerate the learning speed and or improve the quality of the knowledge induced A grammar based genetic programming system called LOGENPRO The LOGic grammar based GENetic PROgramming system is detailed and tested on many problems in data mining It is found that LOGENPRO outperforms some ILP systems We have also illustrated how to apply LOGENPRO to emulate Automatically Defined Functions ADFs to discover problem representation primitives automatically By employing various knowledge about the problem being solved LOGENPRO can find a solution much faster than ADFs and the computation required by LOGENPRO is much smaller than that of ADFs Moreover LOGENPRO can emulate the effects of Strongly Type Genetic Programming and ADFs simultaneously and effortlessly Data Mining Using Grammar Based Genetic Programming and Applications is appropriate for researchers practitioners and clinicians interested in genetic programming data mining and the extraction of data from databases

Genetic Programming Theory and Practice Rick Riolo,Bill Worzel,2003-11-30 Genetic Programming Theory and Practice explores the emerging interaction between theory and practice in the cutting edge machine learning method of Genetic Programming GP The material contained in this contributed volume was developed from a workshop at the University of Michigan s Center for the Study of Complex Systems where an international group of genetic programming theorists and practitioners met to examine how GP theory informs practice and how GP practice impacts GP theory The contributions cover the full spectrum of this relationship and are written by leading GP theorists from major universities as well as active practitioners from leading industries and businesses Chapters include such topics as John Koza s development of human competitive electronic circuit designs David Goldberg s application of competent GA methodology to GP Jason Daida s discovery of a new set of factors underlying the dynamics of GP starting from applied research and Stephen Freeland s essay on the lessons of biology for GP and the potential impact of GP on evolutionary theory The book also includes chapters on the

dynamics of GP the selection of operators and population sizing specific applications such as stock selection in emerging markets predicting oil field production modeling chemical production processes and developing new diagnostics from genomic data Genetic Programming Theory and Practice is an excellent reference for researchers working in evolutionary algorithms and for practitioners seeking innovative methods to solve difficult computing problems   , <u>Illustrating Evolutionary Computation with Mathematica</u> Christian Jacob,2001 Part 1 Fascinating Evolution Part 2 Evolutionary Computation Part 3 If Darwin was a Programmer Part 4 Evolution of Developmental Programs   <u>Machines, Computations, and Universality</u> Jérôme Durand-Lose,2007-08-23 This book constitutes the refereed proceedings of the 5th International Conference on Machines Computations and Universality MCU 2007 held in Orleans France September 2007 The 18 revised full papers presented together with nine invited papers cover Turing machines register machines word processing cellular automata tiling of the plane neural networks molecular computations BSS machines infinite cellular automata real machines and quantum computing   **Parallel Problem Solving from Nature - PPSN X** Günter Rudolph,Thomas Jansen,Simon M.
