Geometric Invariant Theory:

   Geometric Invariant Theory and Decorated Principal Bundles Alexander H. W. Schmitt,2008 The book starts with an introduction to Geometric Invariant Theory GIT The fundamental results of Hilbert and Mumford are exposed as well as more recent topics such as the instability flag the finiteness of the number of quotients and the variation of quotients In the second part GIT is applied to solve the classification problem of decorated principal bundles on a compact Riemann surface The solution is a quasi projective moduli scheme which parameterizes those objects that satisfy a semistability condition originating from gauge theory The moduli space is equipped with a generalized Hitchin map Via the universal Kobayashi Hitchin correspondence these moduli spaces are related to moduli spaces of solutions of certain vortex type equations Potential applications include the study of representation spaces of the fundamental group of compact Riemann surfaces The book concludes with a brief discussion of generalizations of these findings to higher dimensional base varieties positive characteristic and parabolic bundles The text is fairly self contained e g the necessary background from the theory of principal bundles is included and features numerous examples and exercises It addresses students and researchers with a working knowledge of elementary algebraic geometry   **Introduction to Geometric Invariant Theory** Igor V. Dolgachev,1994   **Geometric Invariant Theory** David Mumford,John Fogarty,Frances Kirwan,1994-03-29 This standard reference on applications of invariant theory to the construction of moduli spaces is a systematic exposition of the geometric aspects of classical theory of polynomial invariants This new revised edition is completely updated and enlarged with an additional chapter on the moment map by Professor Frances Kirwan It includes a fully updated bibliography of work in this area   Geometric Invariant Theory, Holomorphic Vector Bundles and the Harder-Narasimhan Filtration Alfonso Zamora Saiz,Ronald A. Zúñiga-Rojas,2021-03-24 This book introduces key topics on Geometric Invariant Theory a technique to obtaining quotients in algebraic geometry with a good set of properties through various examples It starts from the classical Hilbert classification of binary forms advancing to the construction of the moduli space of semistable holomorphic vector bundles and to Hitchin s theory on Higgs bundles The relationship between the notion of stability between algebraic differential and symplectic geometry settings is also covered Unstable objects in moduli problems a result of the construction of moduli spaces get specific attention in this work The notion of the Harder Narasimhan filtration as a tool to handle them and its relationship with GIT quotients provide instigating new calculations in several problems Applications include a survey of research results on correspondences between Harder Narasimhan filtrations with the GIT picture and stratifications of the moduli space of Higgs bundles Graduate students and researchers who want to approach Geometric Invariant Theory in moduli constructions can greatly benefit from this reading whose key prerequisites are general courses on algebraic geometry and differential geometry   **The Moment-Weight Inequality and the Hilbert–Mumford Criterion** Valentina Georgoulas,Joel W. Robbin,Dietmar Arno Salamon,2022-01-01 This book provides an introduction to geometric invariant

theory from a differential geometric viewpoint It is inspired by certain infinite dimensional analogues of geometric invariant theory that arise naturally in several different areas of geometry The central ingredients are the moment weight inequality relating the Mumford numerical invariants to the norm of the moment map the negative gradient flow of the moment map squared and the Kempf Ness function The exposition is essentially self contained except for an appeal to the Lojasiewicz gradient inequality A broad variety of examples illustrate the theory and five appendices cover essential topics that go beyond the basic concepts of differential geometry The comprehensive bibliography will be a valuable resource for researchers The book is addressed to graduate students and researchers interested in geometric invariant theory and related subjects It will be easily accessible to readers with a basic understanding of differential geometry and does not require any knowledge of algebraic geometry **Geometric Invariant Theory** David Mumford,J. Fogarty,1982 **Geometric Invariant Theory for Polarized Curves** Gilberto Bini,Fabio Felici,Margarida Melo,Filippo Viviani,2014-11-07 We investigate GIT quotients of polarized curves More specifically we study the GIT problem for the Hilbert and Chow schemes of curves of degree d and genus g in a projective space of dimension d g as d decreases with respect to g We prove that the first three values of d at which the GIT quotients change are given by d a 2g 2 where a 2 3 5 4 We show that for a 4 L Caporaso s results hold true for both Hilbert and Chow semistability If 3 5a **Geometric Invariant Theory** Nolan R. Wallach,2017-09-08 Geometric Invariant Theory GIT is developed in this text within the context of algebraic geometry over the real and complex numbers This sophisticated topic is elegantly presented with enough background theory included to make the text accessible to advanced graduate students in mathematics and physics with diverse backgrounds in algebraic and differential geometry Throughout the book examples are emphasized Exercises add to the reader s understanding of the material most are enhanced with hints The exposition is divided into two parts The first part Background Theory is organized as a reference for the rest of the book It contains two chapters developing material in complex and real algebraic geometry and algebraic groups that are difficult to find in the literature Chapter 1 emphasizes the relationship between the Zariski topology and the canonical Hausdorff topology of an algebraic variety over the complex numbers Chapter 2 develops the interaction between Lie groups and algebraic groups Part 2 Geometric Invariant Theory consists of three chapters 3 5 Chapter 3 centers on the Hilbert Mumford theorem and contains a complete development of the Kempf Ness theorem and Vindberg s theory Chapter 4 studies the orbit structure of a reductive algebraic group on a projective variety emphasizing Kostant s theory The final chapter studies the extension of classical invariant theory to products of classical groups emphasizing recent applications of the theory to physics **GEOMETRIC INVARIANT THEORY AND DECORATED PRINCIPAL BUNDLES.** ALEXANDER H. W. SCHMITT., The Moment-Weight Inequality and the Hilbert-Mumford Criterion Valentina Georgoulas,Joel W. Swinarski,2003 Invariance and System Theory Allen Tannenbaum,2006-11-14 **Geometric Invariant Theory and Moduli Spaces of Pointed Curves** ,2008 Geometric invariant theory and moduli spaces of pointed curves A Geometric Invariant Theory Construction of Moduli Spaces of Stable Maps Elizabeth Camilla Baldwin,2006 Geometric Invariant Theory; 2nd Ed., [by] D.
