Advances in Analysis and Geometry Tao Qian, Thomas Hempfling, Alan McIntosh, Franciscus Sommen, 2012-12-06 On the 16th of October 1843 Sir William R Hamilton made the discovery of the quaternion algebra $H \cong \mathbb{R} \oplus \mathbb{R}i \oplus \mathbb{R}j \oplus \mathbb{R}k$ whereby the product is determined by the defining relations $i^2 = j^2 = k^2 = -1$ and $ij = k, ji = -k$ In fact he was inspired by the beautiful geometric model of the complex numbers in which rotations are represented by simple multiplications $z \mapsto az$ His goal was to obtain an algebra structure for three dimensional visual space with in particular the possibility of representing all spatial rotations by algebra multiplications and since 1835 he started looking for generalized complex numbers hypercomplex numbers of the form $a + bi + cj + dk$ It hence took

him a long time to accept that a fourth dimension was necessary and that commutativity couldn't be kept and he wondered about a possible real life meaning of this fourth dimension which he identified with the scalar part q_0 as opposed to the vector part $q_1 i + q_2 j + q_3 k$ which represents a point in space

Clifford (Geometric) Algebras William Baylis, 1999-04-23 This volume is an outgrowth of the 1995 Summer School on Theoretical Physics of the Canadian Association of Physicists CAP held in Banff Alberta in the Canadian Rockies from July 30 to August 12 1995 The chapters based on lectures given at the School are designed to be tutorial in nature and many include exercises to assist the learning process Most lecturers gave three or four fifty minute lectures aimed at relative novices in the field More emphasis is therefore placed on pedagogy and establishing comprehension than on erudition and superior scholarship Of course new and exciting results are presented in applications of Clifford algebras but in a coherent and user friendly way to the nonspecialist The subject area of the volume is Clifford algebra and its applications Through the geometric language of the Clifford algebra approach many concepts in physics are clarified united and extended in new and sometimes surprising directions In particular the approach eliminates the formal gaps that traditionally separate classical quantum and relativistic physics It thereby makes the study of physics more efficient and the research more penetrating and it suggests resolutions to a major physics problem of the twentieth century namely how to unite quantum theory and gravity The term geometric algebra was used by Clifford himself and David Hestenes has suggested its use in order to emphasize its wide applicability and because the developments by Clifford were themselves based heavily on previous work by Grassmann Hamilton Rodrigues Gauss and others

Zeevi, 2006-12-30

This volume presents the proceedings of the 2nd International Workshop on Algebraic Frames for the Perception and Action Cycle AFPAC 2000 held in Kiel Germany 10-11 September 2000 The presented topics cover new results in the conceptualization design and implementation of visual sensor based robotics and autonomous systems Special emphasis is placed on the role of algebraic modelling in the relevant disciplines such as robotics computer vision theory of multidimensional signals and neural computation The aims of the workshop are twofold first discussion of the impact of algebraic embedding of the task at hand on the emergence of new qualities of modelling and second facing the strong relations between dominant geometric problems and algebraic modelling The first workshop in this series AFPAC 97 inspired several groups to initiate new research programs or to intensify ongoing research work in this field and the range of relevant topics was consequently broadened The approach adopted by this workshop does not necessarily fit the mainstream of worldwide research granting policy However its search for fundamental problems in our field may very well lead to new results in the relevant disciplines and contribute to their integration in studies of the perception action cycle
