Geometric Function Theory In Several Complex Variables:

Geometric Function Theory in Several Complex Variables Junjirō Noguchi, Takushiro Ochiai, 1990 This is an expanded English language version of a book by the same authors that originally appeared in the Japanese The book serves two purposes The first is to provide a self contained and coherent account of recent developments in geometric function theory in several complex variables aimed at those who have already mastered the basics of complex function theory and the elementary theory of differential and complex manifolds The second goal is to present in a self contained way fundamental descriptions of the theory of positive currents plurisubharmonic functions and meromorphic mappings which are today indispensable in the analytic and geometric theories of complex functions of several variables The book should prove useful for researchers and graduate students alike Geometric Function Theory in Several Complex Variables Junjirō

Noguchi, Takushiro Ochiai, 198? Several Complex Variables III G.M. Khenkin, 2012-12-06 We consider the basic problems notions and facts in the theory of entire functions of several variables i.e. functions $f: \mathbb{C}^n \rightarrow \mathbb{C}$ holomorphic in the entire n space 1 the zero set of an entire function is not discrete and therefore one has no analogue of a tool such as the canonical Weierstrass product which is fundamental in the case $n = 1$ Second for $n \geq 1$ there exist several different natural ways of exhausting the space Function Theory of Several Complex Variables Steven George Krantz, 2001 Emphasizing integral formulas the

Nevanlinna Theory in Several Complex Variables and Diophantine Approximation Junjirō Noguchi, Jörg Winkelmann, 2013-12-09 The aim of this book is to provide a comprehensive account of higher dimensional Nevanlinna theory and its relations with Diophantine approximation theory for graduate students and interested researchers This book with nine chapters systematically describes Nevanlinna theory of meromorphic maps between algebraic varieties or complex spaces building up from the classical theory of meromorphic functions on the complex plane with full proofs in Chap 1 to the current state of research Chapter 2 presents the First Main Theorem for coherent ideal sheaves in a very general form With the preparation of plurisubharmonic functions how the theory to be generalized in a higher dimension is described In Chap 3 the Second Main Theorem for differentiably non degenerate meromorphic maps by Griffiths and others is proved as a prototype of higher dimensional Nevanlinna theory Establishing such a Second Main Theorem for entire curves in general complex algebraic varieties is a wide open problem In Chap 4 the Cartan Nochka Second Main Theorem in the linear projective case and the Logarithmic Bloch Ochiai Theorem in the case of general algebraic varieties are proved Then the theory of entire curves in semi abelian varieties including the Second Main Theorem of Noguchi Winkelmann Yamanoi is dealt with in full details in Chap 6 For that purpose Chap 5 is devoted to the notion of semi abelian varieties The result leads to a number of applications With these results the Kobayashi hyperbolicity problems are discussed in Chap 7 In the last two chapters Diophantine approximation theory is dealt with from the viewpoint of higher dimensional Nevanlinna theory and the Lang Vojta conjecture is confirmed in some cases In Chap 8 the theory over function fields is discussed Finally in Chap 9 the theorems of Roth Schmidt Faltings and Vojta over number fields are presented and formulated in view of Nevanlinna theory

with results motivated by those in Chaps 4 6 and 7

Problems on the Geometric Function Theory in Several

Complex Variables and Complex Geometry Yu'an Yuan, 2010 The thesis consists of two parts In the first part we study the rigidity for the local holomorphic isometric embeddings On the one hand we prove the total geodesy for the local holomorphic conformal embedding from the unit ball of complex dimension at least 2 to the product of unit balls and hence the rigidity for the local holomorphic isometry is the natural corollary Before obtaining the total geodesy the algebraic extension theorem is derived following the idea in cite MN by considering the sphere bundle of the source and target domains When conformal factors are not constant we twist the sphere bundle to gain the pseudoconvexity Then the algebraicity follows from the algebraicity theorem of Huang in the CR geometry Different from the argument in the earlier works the total geodesy of each factor does not directly follow from the properness because the codimension is arbitrary By analyzing the real analytic subvariety carefully we conclude that the factor is either a proper holomorphic rational map or a constant map Lastly the total geodesy follows from a linearity criterion of Huang On the other hand we also derive the total geodesy for the local holomorphic isometries from the projective space to the product of projective spaces In the second part we give a proof for the convergence of a modified Kähler Ricci flow The flow is defined by Zhang on Kähler manifolds while the Kähler class along the evolution is varying When the limit cohomology class is semi positive big and integer the convergence of the flow is conjectured by Zhang and we confirm it by using the monotonicity of some energy functional When the limit class is Kähler the convergence is proven by Zhang and we give an alternative proof by also using the energy functional As a corollary the convergence provides the solution to the degenerate Monge Ampère equation on the Calabi Yau manifold Meanwhile we take the opportunity to describe the Kähler Ricci flow on singular varieties

The Geometric

Theory of Complex Variables Peter V. Dovbush, Steven G. Krantz, 2025-01-28 This book provides the reader with a broad introduction to the geometric methodology in complex analysis It covers both single and several complex variables creating a dialogue between the two viewpoints Regarded as one of the grand old ladies of modern mathematics complex analysis traces its roots back 500 years The subject began to flourish with Carl Friedrich Gauss's thesis around 1800 The geometric aspects of the theory can be traced back to the Riemann mapping theorem around 1850 with a significant milestone achieved in 1938 with Lars Ahlfors's geometrization of complex analysis These ideas inspired many other mathematicians to adopt this perspective leading to the proliferation of geometric theory of complex variables in various directions including Riemann surfaces Teichmüller theory complex manifolds extremal problems and many others This book explores all these areas with classical geometric function theory as its main focus Its accessible and gentle approach makes it suitable for advanced undergraduate and graduate students seeking to understand the connections among topics usually scattered across numerous textbooks as well as experienced mathematicians with an interest in this rich field

Harmony—Geometric Fantasies Umberto Bottazzini, Jeremy Gray, 2013-06-21 This book is a history of complex function

theory from its origins to 1914 when the essential features of the modern theory were in place. It is the first history of mathematics devoted to complex function theory and it draws on a wide range of published and unpublished sources. In addition to an extensive and detailed coverage of the three founders of the subject, Cauchy, Riemann, and Weierstrass, it looks at the contributions of authors from d'Alembert to Hilbert and Laplace to Weyl. Particular chapters examine the rise and importance of elliptic function theory, differential equations in the complex domain, geometric function theory, and the early years of complex function theory in several variables. Unique emphasis has been devoted to the creation of a textbook tradition in complex analysis by considering some seventy textbooks in nine different languages. The book is not a mere sequence of disembodied results and theories but offers a comprehensive picture of the broad cultural and social context in which the main actors lived and worked by paying attention to the rise of mathematical schools and of contrasting national traditions. The book is unrivaled for its breadth and depth both in the core theory and its implications for other fields of mathematics. It documents the motivations for the early ideas and their gradual refinement into a rigorous theory.

Geometric Theory of Functions of a Complex Variable Gennadii Mikhaïlovich Goluzin, 1969 Several Complex Variables and the Geometry of Real Hypersurfaces John P. D'Angelo, 2019-07-16. *Several Complex Variables and the Geometry of Real Hypersurfaces* covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary. The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties. You will learn how to decide whether a real hypersurface contains complex varieties, how closely such varieties can contact the hypersurface, and why it is important. The book concludes with two sets of problems: routine problems and difficult problems, many of which are unsolved. Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable. *Several Complex Variables and the Geometry of Real Hypersurfaces* will be a useful text for advanced graduate students and professionals working in complex analysis. **Recent Developments in Several Complex Variables. (AM-100), Volume 100** John Erik Fornaess, 2016-03-02. A classic treatment of complex variables from the acclaimed *Annals of Mathematics Studies* series. Princeton University Press is proud to have published the *Annals of Mathematics Studies* since 1940. One of the oldest and most respected series in science publishing, it has included many of the most important and influential mathematical works of the twentieth century. The series continues this tradition as Princeton University Press publishes the major works of the twenty-first century. To mark the continued success of the series, all books are available in paperback and as ebooks. **Function Theory in Several Complex Variables** Toshio Nishino, 2001. Kiyoshi Oka, at the beginning of his research, regarded the collection of problems which he encountered in the study of domains of holomorphy as large mountains which separate today and tomorrow. Thus he believed that there could be no essential progress in analysis without

climbing over these mountains this book is a worthwhile initial step for the reader in order to understand the mathematical world which was created by Kiyoshi Oka from the Preface This book explains results in the theory of functions of several complex variables which were mostly established from the late nineteenth century through to the middle of the twentieth century In the work the author introduces the mathematical world created by his advisor Kiyoshi Oka In this volume Oka s work is divided into two parts The first is the study of analytic functions in univalent domains in \mathbb{C}^n Here Oka proved that three concepts are equivalent domains of holomorphy holomorphically convex domains and pseudoconvex domains and moreover that the Poincaré problem the Cousin problems and the Runge problem when stated properly can be solved in domains of holomorphy satisfying the appropriate conditions The second part of Oka s work established a method for the study of analytic functions defined in a ramified domain over \mathbb{C}^n in which the branch points are considered as interior points of the domain Here analytic functions in an analytic space are treated which is a slight generalization of a ramified domain over \mathbb{C}^n In writing the book the author s goal was to bring to readers a real understanding of Oka s original papers This volume is an English translation of the original Japanese edition published by the University of Tokyo Press Japan It would make a suitable course text for advanced graduate level introductions to several complex variables

Geometric Function Theory and Related Topics Sudeb Mitra, Rakesh Kumar Parmar, Saminathan

Ponnusamy, Toshiyuki Sugawa, 2025-06-03 This volume contains the proceedings of the 29th International Conference on Finite or Infinite Dimensional Complex Analysis and Applications held August 21-25 2023 at Pondicherry University Puducherry India It covers a wide range of papers on complex analysis and provides a broad survey of the present state of research in various aspects of geometric function theory The papers in this volume reflect the directions of research in different areas of finite and infinite dimensional complex analysis and also give the reader an idea of how these branches of complex analysis intersect with other areas of mathematics They will be suitable for specialists as well as aspiring researchers who are interested in various areas of geometric function theory
