The Evolution of Conceptual Modeling Roland Kaschek, Lois M.L. Delcambre, 2011-01-19 Conceptual modeling represents a recent approach to creating knowledge. It has emerged in response to the computer revolution which started in the middle of the 20th century. Computers in the meantime have become a major knowledge media. Conceptual modeling provides an answer to the difficulties experienced throughout the development of computer applications and aims at creating effective, reasonably priced, and sharable knowledge about using computers in business. Moreover, it has become evident that conceptual modeling has the potential to exceed the boundaries of business and computer usage. This state-of-the-art survey originates from the International Seminar on the Evolution of Conceptual Modeling held in Dagstuhl Castle, Germany, in April 2008. The major objective of this seminar was to look into conceptual modeling from a historical perspective with a view towards the future of conceptual modeling and to achieve a better understanding of conceptual modeling issues in several different domains of discourse, going beyond individual modeling projects. The book contains 14 chapters. These were carefully selected during two rounds of reviewing and improvement from 26 presentations at the seminar and are preceded by a detailed preface providing general insights into the field of conceptual modeling that are not necessarily discussed in any of the chapters but nevertheless aid in conceptualizing the inner structure and coherence of the field. The chapters are grouped into the following three thematic sections: the evolution of conceptual modeling techniques, the extension of conceptual modeling to a service-oriented peer-to-peer or Web context, and new directions for conceptual modeling.

Advances in Database Technology - EDBT 2000 Carlo Zaniolo, Peter C. Lockemann, Marc H. Scholl, Torsten

Grust, 2000-03-08 EDBT 2000 is the seventh conference in a series dedicated to the advancement of database technology. This year's conference special theme "Connect Millions of Users and Data Sources" underscores the importance of databases for the information age that is dawning with the new millennium. The importance arises not just from the observation that the information age essentially rests on the convergence of communications, computing, and storage. Equally important, many of the concepts and techniques underlying the success of database systems have independent meaning and impact for today's distributed information systems. The papers in the volume should also be seen in this light. The EDBT 2000 conference program includes 30 research papers selected by the program committee out of 187 submissions covering advances in research, development, and applications of databases. The conference program also includes six industry and applications papers, a panel discussion, six tutorials, and several software demonstrations. The conference features three distinguished invited speakers: Ashish Gupta discusses database issues in electronic commerce; Stefano Ceri addresses the impact and challenges of XML on databases; and Andreas Reuter shares his views on new perspectives on database technology. The technical contributions presented at the EDBT 2000 conference are collected and preserved in this volume that we are pleased to present to you with the expectation that it will serve as a valuable research and reference tool in your professional life.
