

Getting started with Phidgets in Microsoft Visual Studio C\C++

Environment and Libraries

First, we need to set up the proper environment and get the necessary files off the Phidgets website. Visit the drivers and programming section at www.phidgets.com and get the latest:

- Phidget Framework
- Visual Studio C/C++ Examples

You will need the Phidget Framework to program Phidgets. We also recommend that you download the following reference materials from the programming section:

- C API Manual
- Programming Manual
- The Product Manual for your device

The C API manual contains calls and events for every type of Phidget and can be used as a reference. You can find a high level discussion about programming with Phidgets in general in the Programming Manual. The Product manual for your device also contains an API section that describes limitations, defaults, and implementation details specific to your Phidget. You may want to have these manuals open while working through these instructions.

Setting up a Phidgets Project

The Phidget examples were written using Visual Studio C++ 2005 and this tutorial assumes its use. Other environments such as other versions of Visual Studio work as well and would be set up in a similar manner. If you are using a different compiler, please consult your compiler documentation for specific details on how to link to external libraries. In Visual C++ 2005:

- Generate a new C/C++ console project with a descriptive name such as PhidgetTest.
- Open the project properties window.
- Navigate to Configuration Properties | C/C++.
- Add "C:\Program Files\Phidgets" to the additional include directories field.
- Navigate to Configuration Properties | Linker | Input.
- Add "C:\Program Files\Phidgets\phidget21.lib" to the additional dependencies field.

The project now has access to the Phidget21 function calls and we are ready to begin coding.
