**Immunodiagnositics** R. Edwards, 1999-11-25 Immunodiagnostic tests are analytical methods that use antibodies as reagents whose results are used to aid diagnosis and are widely used in many scientific disciplines and in many different ways Perhaps the most widespread and obvious use is in clinical applications but immunodiagnostic tests are also used in other fields such as forensic science and environmental and food analysis The different types of test range from simple manual methods to fully automated systems with sophisticated integrated detection Immunodiagnositics A Practical Approach starts off by explaining the principles and development of immunodiagnostic tests specifically the use of radioisotopes as tracers Chapter 2 explains the use of solid phase supports to bind immunoreagents Enzymes are widely used as labels in immunoassays and their use with colourimetric fluorimetric and chemiluminescent detection systems is described The use of enzymes as labels reflects the move away from radioisotopes and one of the most powerful non radioisotopic procedures is the time resolved fluorescence assay Enzymes can also be used as a simple method of obtaining high performance from immunodiagnositics and this application is covered later in the book The next set of techniques to be described are light scattering techniques which can be used in either simple manual assays or in sophisticated automated procedures The penultimate chapter describes the principles of automation of immunodiagnostic tests The last topic to be discussed is that of quality assurance

**Paraneoplastic Neurologic Disorders**, 2024-03-15 This book extensively reviews Paraneoplastic Neurological Syndromes in light of the most recent descriptions of autoantibodies against neuronal cell surface antigens only partly associated with paraneoplastic disorders and the introduction of new immuno oncological drugs that can contribute to causing diseases that are pathogenetically indistinguishable from paraneoplastic syndromes These two new developments have not been addressed in other volumes available on the market Section 1 focuses on immunological defense mechanisms against tumors Besides investigating the pathogenetic mechanisms of these disorders this section will also explore what the introduction of new drugs used in immune checkpoint inhibitor cancer therapy is teaching us in terms of immunopathogenesis The second section will present individual syndromes phenotypical clinical manifestations of the CNS PNS NMJ and muscle These chapters will however be preceded by an epidemiological analysis and a chapter describing the clinical approach to patients with these disorders Consideration will also be given in specific chapters to general therapeutic strategies and the techniques used to search for diagnostically relevant autoantibodies Presentation of the individual diseases will be followed by a third section investigating the role of antibody markers presented in three chapters differentiating cytoplasmic nuclear and neuronal cell surface reactivities The innovative component of the final two sections compared to previously published volumes lies in their presentation of the profile of paraneoplastic diseases by tumor type Special attention will be given to thymoma involved particularly with novel antibodies against surface antigens and neuroendocrine tumours which are as yet comparatively unexplored in the literature Lastly a clinical update will be provided on gynecological hematological and testicular malignancies The last section will address side effects of the new immuno oncological drugs increasingly used in cancer therapy The high number of neurological complications that occur when tumor checkpoints are inhibited against immune defences provides the ideal experimental model for understanding the pathogenesis of these diseases Profiles paraneoplastic diseases by tumor type Identifies the pathogenetic mechanisms of PNS and provides epidemiological analysis Presents individual syndromes of the CNS PNS NMJ and muscle Investigates the role of antibody markers Differentiates cytoplasmic nuclear and neuronal cell surface reactivities Discusses immune oncological drugs causing diseases that are indistinguishable from PNS Reviews therapeutic strategies and clinical approach to PNS patients
