Education Committee,2014-06-18 This report finds that poor white British boys and girls are educationally underperforming but great schools have a transformative effect The problem of poor white British under attainment is real and the gap between those children and their better off class mates starts in their earliest school years and then widens as they get older Just 32% of poor white British children achieve five good GCSEs including English and mathematics compared with 42% of black Caribbean children eligible for free school meals and 61% of disadvantaged Indian children Poor white children also do less homework and have a higher rate of absence from school But good schools and teachers can make a huge difference to the academic achievement of children eligible for free school meals Twice the proportion of poor children attending an outstanding school will achieve five good GCSEs when compared with what the same group will achieve in inadequate schools Guidance for schools is needed on how an extended school day could be used to provide space and time for children to complete homework And more work is needed to understand what interventions can be most effective in improving parental engagement early language stimulus and other home based conditions which can set children up to succeed The Government should also publish an analysis of the incentives that influence where teachers choose to work and use this to design a system that ensures that the most challenging schools can attract the best teachers and leaders

The Color of Credit Stephen L. Ross,John Yinger,2002-11-08 An analysis of current findings on mortgage lending discrimination and suggestions for new procedures to improve its detection In 2000 homeownership in the United States stood at an all time high of 67.4 percent but the homeownership rate was more than 50 percent higher for non Hispanic whites than for blacks or Hispanics Homeownership is the most common method for wealth accumulation and is viewed as critical for access to the most desirable communities and most comprehensive public services Homeownership and mortgage lending are linked of course as the vast majority of home purchases are made with the help of a mortgage loan Barriers to obtaining a mortgage represent obstacles to attaining the American dream of owning one's own home These barriers take on added urgency when they are related to race or ethnicity In this book Stephen Ross and John Yinger discuss what has been learned about mortgage lending discrimination in recent years They re-analyze existing loan approval and loan performance data and devise new tests for detecting discrimination in contemporary mortgage markets They provide an in depth review of the 1996 Boston Fed Study and its critics along with new evidence that the minority white loan approval disparities in the Boston data represent discrimination not variation in underwriting standards that can be justified on business grounds Their analysis also reveals several major weaknesses in the current fair lending enforcement

system namely that it entirely overlooks one of the two main types of discrimination disparate impact misses many cases of the other main type disparate treatment and insulates some discriminating lenders from investigation Ross and Yinger devise new procedures to overcome these weaknesses and show how the procedures can also be applied to discrimination in loan pricing and credit scoring **Classification Bulletin of the United States Patent Office from ...** United States.
