Meeting report** World Health Organization,Food and Agriculture Organization of the United Nations,2024-01-10 Fruits and vegetables are an important part of a healthy diet and are protective against many chronic health conditions Yet fresh fruits and vegetables have been consistently implicated in food safety incidents involving microbiological hazards around the globe for decades In response to requests of the Codex Committee on Food Hygiene concerning microbiological hazards in fresh fruits and vegetables and to update and expand the information available in Microbiological hazards in fresh leafy vegetables and herbs MRA14 which was published in 2008 FAO and WHO convened a

series of expert meetings in 2021 to 2022 The purpose of the meetings was to collect review and discuss relevant measures to control microbiological hazards from primary production to point of sale in fresh ready to eat RTE and minimally processed fruits and vegetables including leafy vegetables The experts made an effort to update and include any recent trends in commodity and pathogen pairing or pathogen occurrence and presence with a focus on emerging and neglected pathogens The primary production in open fields was investigated by considering the location adjacent land use topography and climate prior land use water wildlife animal and human intrusion soil amendments and harvest and packing The experts also worked on primary production in protected facilities minimal processing transport distribution and point of sale and also the gaps in mitigation and interventions measures The advice herein is useful for both risk assessors and risk managers at national and international levels and those in the food industry working to control the relevant hazards in the fresh fruits and vegetables the development of improved mitigation and intervention measures

Joint FAO/WHO Expert Consultation on Risk Assessment of Microbiological Hazards in Foods, FAO Headquarters, Rome, 17-21 July 2000 Food and Agriculture Organization of the United Nations, 2000 The microbiological safety of food is becoming an increasingly important issue in many countries A number of factors have contributed to this including changes in methods of food production and processing changing consumption patterns greater consumer awareness of food safety issues and emerging and re emerging pathogens Also the expansion of international trade in food has increased the risk of infectious agents being disseminated from the original point of production to locations thousands of miles away In addressing this issue at the international level FAO and WHO convened a joint Expert Consultation on Risk Assessment of Microbiological Hazards in Foods from 17 to 21 July 2000 in Rome The meeting specifically addressed risk assessment of *Salmonella* spp in broilers and eggs and *Listeria monocytogenes* in ready to eat foods This report summarizes its findings and includes advice and guidance on hazard characterization and exposure assessment of these pathogen commodity combinations for consideration by FAO WHO Member Countries and the Codex Alimentarius Commission

Exposure Assessment of Microbiological Hazards in Food World Health Organization, 2008 The guidelines aim to provide a practical framework and approach for undertaking exposure assessment of microbiological hazards bacteria fungi viruses protozoa and microbial toxins in foods in the context of a risk assessment or as a stand alone process

Microbiological Hazards in Fresh Leafy Vegetables and Herbs World Health Organization, 2008 Problems linked with pathogens in fresh produce including the associated public health and trade implications have been reported in a number of countries worldwide Furthermore from 1980 to 2004 the global production per annum of fruit and vegetables grew by 94% and fruit and vegetables are a critical component of a healthy diet Thus ensuring the safety of these products is of high importance Reported outbreaks associated with leafy vegetables and herbs have been notable for the wide geographical distribution of the contaminated products the high numbers of consumers exposed and thus the large number of cases This meeting addressed the pathways for contamination survival and persistence

of microbiological hazards associated with leafy vegetables and herbs and the potential management options from primary production through to the consumer Consideration was given to all aspects of the farm to fork continuum i e pre harvest and post harvest

Food Safety: Theory and Practice Paul Knechtges,2012 Written for graduate students or college seniors Food Safety Theory and Practice emphasizes a comprehensive and multidisciplinary approach to food safety It covers important topics related to the prevention of foodborne illnesses and diseases with a farm to fork perspective Each chapter starts with a set of learning objectives for the student and ends with a list of important references and websites for further study and research Scientific principles that underpin food safety are introduced and terminology is explained to facilitate comprehension by the student In keeping with current trends risk analysis and food safety management are stressed throughout the textbook The writing style is concise and to the point and the book contains hundreds of references figures and tables Extremely well organized this book can serve as the primary text for a food safety course or it can serve as a background text for more specialized courses in food safety Key topics include Risk and hazard analysis of goods covers risk assessment and hazard analysis and critical control point HACCP evaluations of food safety Safety management of the food supply provides a farm to fork overview of food safety emphasizing the risks associated with each step in the food supply Food safety laws regulations enforcement and responsibilities describes the major provisions relationship and hierarchy of laws and guidelines designed to ensure a safe food supply The pivotal role of food sanitation safety inspectors including the interpretation of standards problem solving and decision making education of the food handling staff and participation in foodborne illness outbreak investigations

Selection and application of methods for the detection and enumeration of human-pathogenic halophilic *Vibrio* spp. in seafood Food and Agriculture Organization of the United Nations,World Health Organization,2016-01-01 One of the challenges to data collection to inform food safety decision making and monitor the implementation and efficacy of control measures to manage specific food safety is the availability of the appropriate methodology The development of methods for the isolation and identific of pathogenic *Vibrio* spp in seafoods is evolving quickly This often means that methods become more sensitive and efficient but the cost may also increase However the pace of development also means that there is not always adequate time to to comprehensively validate a method for a particular purpose This publication aims to provide guidance on the selection on the most appropriate method to meet a particular purpose and how in a constantly changing environment some local validation work can be undertaken to ensure a method meets the current needs of a regulator industry or risk assessor

Enterobacter Sakazakii and Other Microorganisms in Powdered Infant Formula World Health Organization,2004 Consistent with the need to provide safe feeding for all infants FAO and WHO jointly convened an expert meeting on *Enterobacter sakazakii* and other microorganisms in powdered infant formula Geneva 2 to 5 February 2004 The workshop was organized in response to a specific request to FAO WHO for scientific advice from the Codex Committee on Food Hygiene to provide input for the revision of the Recommended

International Code of Hygienic Practice for Foods for Infants and Children After reviewing the available scientific information the expert meeting concluded that intrinsic contamination of powdered infant formula with *Enterobacter sakazakii* and *Salmonella* has been a cause of infection and illness in infants including severe disease which can lead to serious developmental sequelae and death This report co published with WHO looks at a range of control strategies during both manufacture and subsequent use of powdered infant formula that may be implemented to minimize the risk *Foodborne Infections and Intoxications* Anna Lammerding, 2013-03-06 Microbial food safety risk assessment is a systematic approach to aid our understanding of complex food systems and to translate the potential presence of pathogens in the food production processing and preparation environments into statements of the likelihood and magnitude of a food safety risk in terms of adverse public health outcomes The Codex Alimentarius Commission the international body responsible for defining risk assessment principles and practices for all foodborne hazards endorses a framework for risk assessment that provides a structured format and process for MRA However this guidance is not intended to be prescriptive but allows for different approaches and the use of novel analytical tools for assessing risk to translate scientific data and knowledge into practical information to better inform managers and decision makers when dealing with the many challenges that arise in the complex field of food safety

Risk Assessment of *Listeria Monocytogenes* in Ready-to-eat Foods, 2004 Cases of listeriosis appear to be predominantly associated with ready to eat products FAO and WHO have undertaken a risk assessment of *Listeria monocytogenes* in ready to eat foods prepared and reviewed by an international team of scientists Input was received from several international fora including expert consultations and Codex Alimentarius committee meetings as well as via public and peer review This technical report provides complete documentation of the risk assessment the approaches taken the data and methodology used and the results It also contains four example assessments addressing the risk of listeriosis associated with fresh milk ice cream fermented meats and cold smoked fish These products were selected to represent typical classes of ready to eat products
