

EVOLUTION OF STARS

After 10 billion years, the small star will run out of hydrogen and starts fusing helium, which causes the star to expand to a red giant

Planetary Nebula

After the star runs out of helium, the star will try to combine carbon, which the star can't combine. So the gas spreads apart from the star leaving behind a carbon dense white dwarf.

White Dwarf

When the white dwarf runs out of its remaining energy, it loses its brightness and becomes a brown dwarf.

After the star explodes, the star can do two different things based on its size

1. It can form a very dense NEUTRON STAR
2. It can form the most densest object in the universe, a BLACK HOLE

Formation And Evolution Of Star Clusters:

The Formation and Evolution of Star Clusters Kenneth Janes, 1991 *The Formation and Evolution of Star Clusters* Simon Goodwin, Nate Bastian, 2013-09-01 In the past decade our picture of star and cluster formation has changed hugely we now believe that many if not most stars form in clusters and the process of star and cluster formation is extremely rapid and dynamic This book will provide an overview of our current understanding of the formation and evolution of star clusters This book will cover our understanding of how gas turns into stars and the structure and kinematics of very young star forming regions It will then describe how we think these young star forming regions evolve into clusters before destroying themselves It will also cover our understanding of young clusters in external galaxies especially starbursts and how these populations could evolve into globular cluster systems On the Formation and Evolution of Stars and Star Clusters in the Milky Way Michael J. Alexander, University of Wyoming. Department of Physics and Astronomy, 2012 Since the launch of the Spitzer Space Telescope the field of star formation SF has undergone a revolution as regions of our Galaxy once hidden have been revealed Large scale surveys have provided fodder on a myriad of topics both expected and unexpected The following work highlights my contributions to the fields of Galactic SF and cluster evolution My dissertation begins in Chapter 2 with the discovery of a massive star cluster containing more than a dozen red supergiant stars Based on the number of supergiants it is one of the largest star clusters in the Galaxy and it is now believed to be part of a burst of SF that created over 10^5 M_{\odot} of stars in just a few Myr Chapter 3 is my paper on a very different type of star cluster which we termed ultracompact embedded clusters UCECs UCECs may represent a new class of heavily embedded M_{\odot} gas $100 M_{\odot}$ low stellar mass M_{\odot} Formation and Evolution of Star Clusters and Their Host Galaxies J. M. D. Kruijssen, 2011 **Dynamics of Young Star Clusters and Associations** Cathie Clarke, Robert D. Mathieu, Iain Neill Reid, 2015-09-11 Where do most stars and the planetary systems that surround them in the Milky Way form What determines whether a young star cluster remains bound such as an open or globular cluster or disperses to join the field stars in the disc of the Galaxy These questions not only impact understanding of the origins of stars and planetary systems like our own and the potential for life to emerge that they represent but also galaxy formation and evolution and ultimately the story of star formation over cosmic time in the Universe This volume will help readers understand our current views concerning the answers to these questions as well as frame new questions that will be answered by the European Space Agency's Gaia satellite that was launched in late 2013 The book contains the elaborated notes of lectures given at the 42nd Saas Fee Advanced Course Dynamics of Young Star Clusters Associations by Cathie Clarke University of Cambridge who presents the theory of star formation and dynamical evolution of stellar systems Robert Mathieu University of Wisconsin who discusses the kinematics of star clusters and associations and I Neill Reid Space Telescope Science Institute who provides an overview of the stellar populations in the Milky Way and speculates on from whence came the Sun As part of the Saas Fee Advanced

Course Series the book offers an in depth introduction to the field serving as a starting point for Ph D research and as a reference work for professional astrophysicists **Star Clusters (IAU S266)** International Astronomical Union.

Symposium,2010-02-04 Star clusters are important to many areas of astronomy and as the basic building blocks of galaxies they can be used as key diagnostic tools within a wide range of disciplines in astrophysics Star cluster populations are powerful tracers of the formation assembly and evolutionary history of their parent galaxies Although their importance has been recognised for decades only in recent years has this area seen a major investment in time and effort IAU Symposium 266 consolidates the expertise of leading researchers from a variety of topical subfields in astrophysics to provide a comprehensive presentation of cutting edge developments in theory observations and simulations of star clusters and star cluster systems across a range of sizes and epochs This volume gives an account of this forefront research answering fundamental questions that will improve our understanding of numerous related issues and show how this field will take its next major step forward **Literature 1991, Part 2** Astronomisches Rechen-Institut,2013-06-29 Astronomy and

Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world

Evolution of Stellar Clusters Joshua E. Wall,2019 We describe a novel numerical method for the studying the formation and evolution of stellar clusters Torch This method combines the magnetohydrodynamics code Flash with the Astrophysical Multipurpose Software Environment AMUSE Once embedded into AMUSE we combine Flash with the stellar evolution code SeBa the N body dynamics code ph4 and the multiple star system evolution module multiples to create a unique method for tracing the detailed evolution of stellar clusters through time We then add units for radiation stellar winds and supernovae as well as a new star by star formation prescription to Flash that allows for star formation and stellar feedback to create and destroy star clusters and the interstellar gas they form from The result is the most detailed star cluster formation code to date We then demonstrate the use of these methods for studying binary star formation and the effects of stellar feedback We find that massive dynamical binaries created in our simulations are consistent with observations Further we observe that wide dynamical binaries tighten due to gas dynamical friction losing cluster energy to the natal gas after which they are disrupted by stellar encounters This supports theoretical predictions that embedded clusters may contract due to the interactions of gas and stars We also find that while stellar feedback is effective at expelling gas from natal clusters the clusters themselves remain bound even as they expand due to the loss of the binding potential of the gas Finally stellar

clusters formed in our simulations mass segregate before the expulsion of their natal gas clouds as expected from observations of young clusters in the Milky Way

Multi-scale Approach of the Formation and Evolution of Star Clusters Julien Dorval, 2016 Young star clusters are substructured and undergo a dynamical evolution erasing this substructure to form relaxed spherical clusters I present a new method to generate realistic initial conditions to perform N body simulations of this process the Hubble Lemaitre fragmentation By expanding an initially uniform sphere I allow spontaneous overdensities to grow creating a realistic model for young clumpy stellar systems This method is validated by analysing the distribution and content of the clumps and comparing them to hydrodynamical simulations of star formation as well as observations of star forming regions These systems undergo a softer collapse than uniform ones I injected binary stars in the fragmented models and found they were heavily processed when substructure was present I also found extreme short and tight binaries down to 0.01 AU to form in the models The method has a lot of potential such as the generation of mock observations of star forming regions

The Birth of Star Clusters Steven Stahler, 2017-11-04 All stars are born in groups The origin of these groups has long been a key question in astronomy one that interests researchers in star formation the interstellar medium and cosmology This volume summarizes current progress in the field and includes contributions from both theorists and observers Star clusters appear with a wide range of properties and are born in a variety of physical conditions Yet the key question remains How do diffuse clouds of gas condense into the collections of luminous objects we call stars This book will benefit graduate students newcomers to the field and also experienced scientists seeking a convenient reference

the evolution with time of observable stellar properties such as luminosities and surface chemical abundances This is followed by a detailed presentation and discussion of a broad range of related techniques that are widely applied by researchers in the field to investigate the formation and evolution of galaxies This book will be invaluable for undergraduates and graduate students in astronomy and astrophysics and will also be of interest to researchers working in the field of Galactic extragalactic astronomy and cosmology comprehensive presentation of stellar evolution theory introduces the concept of stellar population and describes stellar population synthesis methods to study ages and star formation histories of star clusters and galaxies presents stellar evolution as a tool for investigating the evolution of galaxies and of the universe in general

The Complex Lives of Star Clusters David Stevenson,2015-05-09 As with the author s recent books *Extreme Explosions* and *Under a Crimson Sun* the complex topic of star clusters is broken down and made accessible with clear links to other areas of astronomy in a language which the non specialist can easily read and enjoy The full range of topics are addressed regarding how star clusters are formed Why is it some are dense conglomerates of stars while others are looser associations Are the young brilliant clusters seen in neighboring galaxies such as the Large Magellanic Cloud M33 or M82 analogous to the ancient globulars seen in the Milky Way How will these clusters change as their stars wane and die More interestingly how does living in a dense star cluster affect the fates of the stars and any attendant planets that accompany them Star clusters form many of the most dazzling objects in the astronomers catalogs Many amateur astronomers are interested in exploring how these objects are created and what it would be like to live among these objects From the historical views of how star clusters came about to the most recent assumptions about how stars within these clusters evolve different strands of science from observation to theory are woven together into a compelling investigation specifically targeted at amateur astronomers
