Foundations of Differential Geometry Shōshichi Kobayashi, Katsumi Nomizu, 1963 *Foundations of Differential Geometry, Volume 2* Shoshichi Kobayashi, Katsumi Nomizu, 1996-02-22 This two volume introduction to differential geometry part of Wiley's popular Classics Library lays the foundation for understanding an area of study that has become vital to contemporary mathematics. It is completely self-contained and will serve as a reference as well as a teaching guide. Volume 1 presents a systematic introduction to the field from a brief survey of differentiable manifolds, Lie groups and fibre bundles to the extension of local transformations and Riemannian connections. The second volume continues with the study of variational problems on geodesics through differential geometric aspects of characteristic classes. Both volumes familiarize readers with basic computational techniques.

Foundations of Differential Geometry [by] Shoshichi Kobayashi and Katsumi Nomizu Shōshichi Kobayashi, Katsumi Nomizu, 1963 *Foundations of Differentiable Manifolds and Lie Groups* Frank W. Warner, 1983-10-10 *Foundations of Differentiable Manifolds and Lie Groups* gives a clear, detailed and careful development of the basic facts on manifold theory and Lie Groups. It includes differentiable manifolds, tensors and differentiable forms, Lie groups and homogeneous spaces, integration on manifolds and in addition provides a proof of the de Rham theorem via sheaf cohomology theory and develops the local theory of elliptic operators culminating in a proof of the Hodge theorem. Those interested in any of the diverse areas of mathematics requiring the notion of a differentiable manifold

Transformation Groups in Differential Geometry Shoshichi Kobayashi, 1995-02-15 Given a mathematical structure one of the basic associated mathematical objects is its automorphism group The object of this book is to give a biased account of automorphism groups of differential geometric structures All geometric structures are not created equal some are creations of gods while others are products of lesser human minds Amongst the former Riemannian and complex structures stand out for their beauty and wealth A major portion of this book is therefore devoted to these two structures Chapter I describes a general theory of automorphisms of geometric structures with emphasis on the question of when the automorphism group can be given a Lie group structure Basic theorems in this regard are presented in 3 4 and 5 The concept of G structure or that of pseudo group structure enables us to treat most of the interesting geometric structures in a unified manner In 8 we sketch the relationship between the two concepts Chapter I is so arranged that the reader who is primarily interested in Riemannian complex conformal and projective structures can skip 5 6 7 and 8 This chapter is partly based on lectures I gave in Tokyo and Berkeley in 1965 The Foundations of Differential Geometry Albert Edward Ingham, Constantin Carathéodory, Oswald Veblen, 1932 **The foundations of differential geometry, by O.Veblen and J.H.C.Whitehead** Oswald Veblen, John Henry Constantine Whitehead,
