Elements of Architecture Mikkel Bille, Tim Flohr Sorensen, 2016-02-26 Elements of Architecture explores new ways of engaging architecture in archaeology It conceives of architecture both as the physical evidence of past societies and as existing beyond the physical environment considering how people in the past have not just dwelled in buildings but have existed within them The book engages with the meeting point between these two perspectives For although archaeologists must deal with the presence and absence of physicality as a discipline which studies humans through things to understand humans they must also address the performances as well as temporal and affective impacts of these material remains The contributions in this volume investigate the way time performance and movement both physically and emotionally are central aspects of understanding architectural assemblages It is a book about the constellations of people places and things that emerge and dissolve as affective mobile performative and temporal engagements This volume juxtaposes archaeological research with perspectives from anthropology architecture cultural geography and philosophy in order to explore the kaleidoscopic intersections of elements coming together in architecture Documenting the ephemeral relational and emotional meeting points with a category of material objects that have defined much research into what it means to be human Elements of Architecture elucidates and expands upon a crucial body of evidence which allows us to explore the lives and interactions of past societies

**Introducing Architectural Theory** Korydon Smith, Miguel Guitart, 2024-01-22 Building on the success of the first edition an engaging and reader friendly work on complex ideas Introducing Architectural Theory Expanding the Disciplinary Debate broadens the range of themes voices and geographies represented to provide a more comprehensive and contemporary theory book This book presents major discourses in

architectural theory and design in a debate like format integrating a series of edited texts across architectural history with context and newly written commentaries by the authors This new edition has been fully revised updated and expanded to include long standing debates such as simplicity vs complexity or the relationship between form and function as well as newer discussions on innovation globalization and social equity Authors Smith and Guitart provide a comprehensive means and conceptual framework for readers to compare multiple points of view The chapter structure discussion questions and additional resources allow teachers to facilitate in class discussions and writing assignments This book remains the most accessible architectural theory textbook written for beginning architecture students and those outside the discipline Its reflective and critical approach will equally engage the minds of upper level students and experts

**Introducing Architectural Theory** Korydon H. Smith, 2012 Presents common architectural subjects as though they were conversations across history between theorists by providing you with the original text a reflective text and a philosophical text

The Autopoiesis of Architecture, Volume I Patrik Schumacher, 2011-04-20 Take a theoretical approach to architecture with The Autopoiesis of Architecture which presents the topic as a discipline with its own unique logic Architecture's conception of itself is addressed as well as its development within wider contemporary society Author Patrik Schumacher offers innovative treatment that enriches architectural theory with a coordinated arsenal of concepts facilitating both detailed analysis and insightful comparisons with other domains such as art science and politics He explores how the various modes of communication comprising architecture depend upon each other combine and form a unique subsystem of society that co evolves with other important autopoietic subsystems like art science politics and the economy The first of two volumes that together present a comprehensive account of architecture's autopoiesis this book elaborates the theory of architecture's autopoiesis in 8 parts 50 sections and 200 chapters Each of the 50 sections poses a thesis drawing a central message from the insights articulated within the respective section The 200 chapters are gathering and sorting the accumulated intelligence of the discipline according to the new conceptual framework adopted in order to catalyze and elaborate the new formulations and insights that are then encapsulated in the theses However while the theoretical work in the text of the chapters relies on the rigorous build up of a new theoretical language the theses are written in ordinary language with the theoretical concepts placed in brackets The full list of the 50 theses affords a convenient summary printed as appendix at the end of the book The second volume completes the analysis of the discourse and further proposes a new agenda for contemporary architecture in response to the challenges and opportunities that confront architectural design within the context of current societal and technological developments

**Pamphlet Architecture 21: Situation Normal** Paul Lewis, Marc Tsurumaki, David J. Lewis, 1998-12 In this volume the latest addition to the award winning Pamphlet Architecture series the authors examine common architectural forms chairs doors and walls and programs a cinema a health club a skyscraper in order to dissect and reconfigure them In the process they create ten new projects that draw their power from

an oscillation between the recognizable and the surreal. Cleverly undermining the conventions and norms of contemporary architectural design, the authors pose a direct challenge to the seemingly endless search for new styles, arguing instead that the greatest potential for architecture in the twenty-first century rests on an imaginative examination of what we take for granted. Designed by authors Situation Normal, weaves together text, photographs, and drawings. An introductory essay establishes the theoretical and historical position of the book. **Realization of Forms in Contemporary Architecture** Pallavi Tiwari, 2024-03-20. Realization of Forms in Contemporary Architecture takes a captivating journey through the minds of visionary architects who push boundaries and redefine what's possible. From the philosophies and methodologies driving these architectural masterminds to cutting-edge trends in the field, this book unravels the secrets behind these awe-inspiring structures. The book uncovers how digital technology is revolutionizing this process, opening doors to unimaginable possibilities and exploring material-based forms that challenge traditional norms, as well as the hurdles faced in conceptualization, construction, and societal acceptance. It also provides thought-provoking insights into where contemporary architecture is headed. Whether you're an architecture student, enthusiast, or simply curious about ground-breaking design, this book will leave you inspired and eager to push the boundaries of what is possible in the world of architecture.

**The Autopoiesis of Architecture, Volume II** Patrik Schumacher, 2012-04-24. This is the second part of a major theoretical work by Patrik Schumacher, which outlines how the discipline of architecture should be understood as its own distinct system of communication. Autopoiesis comes from the Greek and means literally self-production; it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self-organizing system and has since been transposed into a theory of social systems. This new approach offers architecture an arsenal of general comparative concepts. It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art, science, and political discourse. On the basis of such comparisons, the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering. Schumacher accordingly argues controversially that design, as a discipline, has its own sui generis intelligence with its own internal logic, reach, and limitations. Whereas the first volume provides the theoretical groundwork for Schumacher's ideas, focusing on architecture as an autopoietic system with its own theory, history, medium, and its unique societal function, the second volume addresses the specific contemporary challenges and tasks that architecture faces. It formulates these tasks, looking specifically at how architecture is seeking to organize and articulate the complexity of post-Fordist network society. The volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty. Architecture's specific role within contemporary society is explained, and its relationship to politics is clarified. Finally, the new global style of Parametricism is introduced and theoretically grounded.
