complementary levels adult performance cognitive development and cultural history and prehistory Scholars from several disciplines contribute to this volume including researchers in cognitive developmental social and evolutionary psychology neuropsychology cognitive anthropology epistemology and philosophy of mind This contemporary important collection appeals to researchers in the fields of cognitive social developmental and evolutionary psychology and will prove valuable to researchers in the decision sciences

Human and Machine Perception 3 Virginio Cantoni,Vito di Gesù,Alessandra Setti,Domenico Tegolo,2012-12-06 The following are the proceedings of the Fourth International Workshop on Human and Machine Perception held in Palermo Italy on June 20 23 2000 under the auspices of three Institutions the Cybernetic and Biophysics Group GNCB of the Italian National Research Council CNR and the two Inter Department Centers of Cognitive Sciences of Palermo and Pavia University respectively A broad spectrum of topics are covered in this series ranging from computer perception to psychology and physiology of perception The theme of this workshop on Human and Machine Perception was focused on Thinking Deciding and Acting As in the past editions the final goal has been the analysis and the comparison of biological and artificial solutions The focus of the lectures has been on presenting the state of the art and outlining open questions In particular they sought to stress links suggesting possible synergies between the different cultural areas The panel discussion has been conceived as a forum for an open debate briefly introduced by each panelist and mainly aimed at deeper investigation of the different approaches to perception and strictly related topics The panelists were asked to prepare a few statements on hot points as a guide for discussion These statements were delivered to the participants together with the final program for a more qualified discussion

Clinical Judgment: A Critical Appraisal H. Tristram Engelhardt Jr.,S.F. Spicker,B. Towers,2012-12-06 Over a period of a year the symposium on clinical judgment has taken shape as a volume devoted to the analysis of how knowledge claims are framed in medicine and how choices of treatment are made We hope it will afford the reader whether layman physician or philosopher a useful perspective on the process of knowing what occurs in medicine and that the results of the discussions at the Fifth Symposium on Philosophy and Medicine will lead to a better understanding of how philosophy and medicine can usefully challenge each other As the interchange between physicians philosophers nurses and psychologists recorded in the major papers the commentaries and the round table discussion shows these issues are truly interdisciplinary In particular they have shown that members of the health care professions have much to learn about themselves from philosophers as well as much of interest to engage philosophers By making the structure of medical reasoning more apparent to its users philosophers can show health care practitioners how better to master clinical judgment and how better to focus it towards the goods and values medicine wishes to pursue Becoming clearer about the process of knowing can in short teach us how to know better and how to learn more efficiently The result can be more than though it surely would be enough a powerful intellectual insight into a major cultural endeavor

Utility, Probability, and Human Decision Making D. Wendt, C.A. Vlek, 2012-12-06 Human decision making involves problems which are being studied with increasing interest and sophistication They range from controversial political decisions via individual consumer decisions to such simple tasks as signal discriminations Although it would seem that decisions have to do with choices among available actions of any kind there is general agreement that decision making research should pertain to choice problems which cannot be solved without a predecisional stage of finding choice alternatives weighing evidence and judging values The ultimate objective of scientific research on decision making is two fold a to develop a theoretically sound technology for the optimal solution of decision problems and b to formulate a descriptive theory of human decision making The latter may in turn protect decision makers from being caught in the traps of their own limitations and biases Recently in decision making research the strong emphasis on well defined laboratory tasks is decreasing in favour of more realistic studies in various practical settings This may well have been caused by a growing awareness of the fact that decision behaviour is strongly determined by situational factors which makes it necessary to look into processes of interaction between the decision maker and the relevant task environment Almost inevitably there is a parallel shift of interest towards problems of utility measurement and the evaluation of consequences
