Formal Deductive Logic Robert Hahn, 1998-01-01 Formal Deductive Logic Hahn, 2001-08 *Formal Deductive Logic* Robert Hahn, 1994-08 Formal Deductive Logic Rob Hahn, 1996-01-01 **Notes in Formal Deductive Logic** Raymond J. McCall, **The Discovery of Deduction** Joelle Hodge, Aaron Larsen, Shelly Johnson, 2010-03 Provides an introduction to formal deductive logic using Socratic dialogue and discussion **Basic Logic** Raymond Joseph McCall, 1952 **Basic Logic** Raymond J. MacCall, 1961 *Logic, Deductive and Inductive* Carveth Read, 1898 **Handbook of the Logic of Argument and Inference** R.H. Johnson, H.J. Ohlbach, Dov M. Gabbay, John Woods, 2002-09-11 The Handbook of the Logic of Argument and Inference is an authoritative reference work in a single volume designed for the attention of senior undergraduates graduate students and researchers in all the leading research areas concerned with the logic of practical argument and inference After an introductory chapter the role of standard logics is surveyed in two chapters These chapters can serve as a mini course for interested readers in deductive and inductive logic or as a refresher Then follow two chapters of criticism one the internal critique and the other the empirical critique The first deals with objections to standard logics as theories of argument and inference arising from the research programme in philosophical logic The second canvasses criticisms arising from work in cognitive and experimental psychology The next five chapters deal with developments in dialogue logic interrogative logic informal logic probability logic and artificial intelligence The last chapter surveys formal approaches to practical reasoning and anticipates possible future developments Taken as a whole the Handbook is a single volume indication of the present state of the logic of argument and inference at its conceptual and theoretical best Future editions will periodically incorporate significant new developments *Mind*, 1911 A quarterly review of philosophy **The Holistic Inspirations of Physics** Val Dusek, 1999 While many books have claimed parallels between modern physics and Eastern philosophy none have dealt with the historical influences of both Chinese traditional thought and non mechanistic holistic western thought on the philosophies of the scientists who developed electromagnetic field theory In *The Holistic Inspirations of Physics* R Valentine Dusek asks to what extent is classical field theory a product of organic and holistic philosophies and frameworks Electromagnetic theory has been greatly influenced by holistic worldviews Dusek posits and he highlights three alternative scientific systems that made the development of electromagnetic theory possible medieval Chinese science Western Renaissance occultism and the German romantic traditions He situates these alternative approaches in their social context and background and traces their connection with components of accepted physical science in relation to a number of social movements and philosophical theories Readers will learn of specific contributions made by these alternative traditions such as the Chinese inventing the compass and discovering the earth's magnetic field and magnetic declination Western alchemical ideas of active forces and occult influences contributed to Newton's theory of gravitation force as action at a distance rather as a result of purely mechanical collisions and contact action Dusek also

describes the extent to which women's culture supplied often without credit the philosophical background ideas that were absorbed into mainstream field theory

Rhetoric and Argumentation in the Beginning of the XX Century Henrique Jales Ribeiro, 2009-12-01 This book is the edition of the Proceedings of the International Colloquium Rhetoric and Argumentation in the Beginning of the XXIst Century which was held at the Faculty of Letters of the University of Coimbra in October 24 2008 and was organized by Henrique Jales Ribeiro Joaquim Neves Vicente and Rui Alexandre Grácio The main purpose of the Colloquium was to commemorate the publication in 1958 of the books *La nouvelle rhétorique* Trait de l'argumentation and *The Uses of Arguments* by respectively C Perelman L Olbrechts Tyteca and S Toulmin But another important goal was to take stock of the state of rhetoric and argumentation theory at the beginning of a new century It was a unique event without parallel in Portugal and worldwide considering its theme and its aims which gathered some of the World's most renowned rhetoric and argumentation theorists Alan Gross Douglas Walton Erik Krabbe Frans V Eemeren F Snoeck Henkemans Guy Haarscher John Anthony Blair Marianne Doury Oswald Ducrot Ruth Amossy The book includes a variety of very important contributions to rhetoric and argumentation theory ranging from those that naturally fall within the subject matter to the areas of philosophy linguistics communication theory education theory and law theory The art as it was called in the Medieval curricula is no longer a discipline amongst others and has become according to the view of some specialists and largely owing to Perelman and Toulmin influences a new paradigm of rationality for our age which auspiciously encompasses all fields of knowledge and culture The book is divided into five parts I Historical and philosophical studies on the influences of Perelman and Toulmin II Studies in argumentation theory III Linguistic approaches to argumentation theory IV Rhetoric and communication theory education theory approaches to argumentation and V Law theory approaches to argumentation

The Practice of Argumentation David Zarefsky, 2019-09-19 This book uses different perspectives on argumentation to show how we create arguments test them attack and defend them and deploy them effectively to justify beliefs and influence others David Zarefsky uses a range of contemporary examples to show how arguments work and how they can be put together beginning with simple individual arguments and proceeding to the construction and analysis of complex cases incorporating different structures Special attention is given to evaluating evidence and reasoning the building blocks of argumentation Zarefsky provides clear guidelines and tests for different kinds of arguments as well as exercises that show student readers how to apply theories to arguments in everyday and public life His comprehensive and integrated approach toward argumentation theory and practice will help readers to become more adept at critically examining everyday arguments as well as constructing arguments that will convince others

Argument, Inference and Dialectic R.C. Pinto, 2013-03-14 Chapters 1-12 of this volume contain the papers on informal logic and argumentation that I've published and/or read at conferences over the last 17 years These papers are reproduced here pretty much unchanged from their first appearance it is my intention that their appearance here constitute a record of my positions

and arguments at the time of their original publication or delivery I've made minor changes in format in the style of references etc for the sake of consistency I've also corrected typographical errors and the like The only extensive changes in wording occur in the last few pages of Chapter 7 and were made only to enable the reader to see more clearly what I was getting at in my first attempt to write about the notion of coherence Chapter 13 was written expressly for this volume It looks retrospectively at the contents of the first 12 chapters and attempts to highlight the unifying themes that run through them It also revisits the ideas about dialectic that occupied my first in light of later developments in my thinking but also re-paper reworking them emphasizing themes about which I've tended to remain silent in the last few years **Manifest Rationality**

Ralph H. Johnson, 2012-11-12 This book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years At the same time it defines a core position in the theory of argument in which those issues can be further explored The underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact A further concern is for logic as a discipline Argumentative and dialectical in nature this book presupposes some awareness of the theory of argument in recent history and some familiarity with the positions that have been advanced It will be of interest to academics researchers and advanced undergraduate and graduate students in the disciplines of logic rhetoric linguistics speech communication English composition and psychology **Before Logic** Richard

Mason, 2000-03-31 Argues that there is an undeniable and essentially historical dimension to logic **The Bankruptcy of Economics: Ecology, Economics and the Sustainability of the Earth** Joseph Wayne Smith, Graham Lyons, Gary Sauer-Thompson, 2016-07-27 We live in times of uncertainty and insecurity at a personal national and global level Writers such as Samuel P Huntington and Robert D Kaplan respectively have spoken of an emerging clash of civilizations and of coming anarchy This book is also concerned with the future of civilization in particular with the conflict between economic growth and the sustainability of the biophysical life-support systems of the planet arguing that the flawed system of orthodox neo-classical economics has justified the modernist belief in the necessity of unending economic growth and the ceaseless exploitation of nature **Dialogical Rhetoric** W. Slob, 2013-11-11 Contemporary developments in philosophy have declared

truth as such troublesome and not merely gaining access to it In a systematic survey this study investigates what is at stake when truth is given up A historical overview shows how the current problem of truth came about and suggests ways to overcome rather than to repair the problem A key issue resulting from the loss of truth is the lack of normativity Truth provided an alternative understanding of normativity Elaborating on the dialectical shift in logic a dialogico-rhetorical understanding of normativity is presented Rather than requiring truth agreement or rationality dialogico-rhetorical normativity is the result of a balance of particular standards This type of normativity is shaped within discussions by advancing and accepting arguments and is not located in sets of predetermined rules The result is a small but strong form of normativity If this understanding of normativity is viable one of the central problems of contemporary philosophy the

problem of incommensurability can be seen in a different light As a result truth reappears again Surviving the postmodern criticisms it is a matter of accountability rather than of description

Deep Thinking: What Mathematics Can Teach Us About The Mind William Byers, 2014-09-22

There is more than one way to think Most people are familiar with the systematic rule based thinking that one finds in a mathematical proof or a computer program But such thinking does not produce breakthroughs in mathematics and science nor is it the kind of thinking that results in significant learning Deep thinking is a different and more basic way of using the mind It results in the discontinuous aha experience which is the essence of creativity It is at the heart of every paradigm shift or reframing of a problematic situation The identification of deep thinking as the default state of the mind has the potential to reframe our current approach to technological change education and the nature of mathematics and science For example there is an unbridgeable gap between deep thinking and computer simulations of thinking Many people suspect that such a gap exists but find it difficult to make this intuition precise This book identifies the way in which the authentic intelligence of deep thinking differs from the artificial intelligence of big data and analytics Deep thinking is the essential ingredient in every significant learning experience which leads to a new way to think about education It is also essential to the construction of conceptual systems that are at the heart of mathematics and science and of the technologies that shape the modern world Deep thinking can be found whenever one conceptual system morphs into another The sources of this study include the cognitive development of numbers in children neuropsychology the study of creativity and the historical development of mathematics and science The approach is unusual and original It comes out of the author's lengthy experience as a mathematician teacher and writer of books about mathematics and science such as *How Mathematicians Think Using Ambiguity Contradiction and Paradox to Create Mathematics* and *The Blind Spot Science and the Crisis of Uncertainty*
