Scientific American ,1908 **For They Know Not what They Do** Slavoj Žižek,2002 With the disintegration of state socialism we are witnessing this eruption of enjoyment in the re emergence of aggressive nationalism and racism With the lid of repression lifted the desires that have emerged are from from democratic To explain this apparent paradox says Slavoj Žižek socialist critical thought must turn to psychoanalysis For They Know Not What They Do seeks to understand the status of enjoyment within ideological discourse from Hegel through Lacan to these political and ideological deadlocks The author s own enjoyment of popular culture makes this an engaging and lucid exposition in which Hegel joins hands with Rossellini Marx with Hitchcock Lacan with Frankenstein high theory with Hollywood melodrama Light Chris Woodford,2012-07-15 Light fills our world with color and life Without light the world we are used to would not exist at all Light aids in plant growth plants then provide the food for animals to eat thus beginning the food chain on Earth In this way light makes possible almost all of the life on our planet Light is also increasingly important to people for other reasons Modern telecommunications including telephones and the Internet rely on beams of laser light that shine through tiny fiber optic cables Light makes possible all manner of cutting edge technology from telemedicine to virtual reality and from special effects to CD players Scientists have spent great amounts of time over the centuries trying to understand light Although early civilizations knew what light was and how to use it the ancient Greeks and Romans were the first to try to find out how and why light worked as it did Later scientists believed that light was a stream of particles others thought it must be a train of waves Eventually

scientists realized that light is a form of radiation similar to radio waves and X rays and that it can be a wave and a particle at the same time These discoveries led to the theory of quantum mechanics which seeks to explain the world inside the atom Meanwhile attempts to measure the speed of light produced the world of relativity where space and time behave in unexpected ways The story of light is a tale of how some very different scientific theories gradually build on one another to give us a better understanding of the world Eventually through the work of many different scientists and over a long period of time one theory stands out among all the others as the best explanation In the case of light that process has taken more than 2 000 years This book retells this epic trials and errors in vivid detail and with lavish photographs and illustrations Supplemental content includes an activity spread a substantial and highly detailed timeline and a list of key people with mini biographies

Electricity Chris Woodford,2012-07-15 The quest to understand how electricity works has led to some of the most important discoveries and inventions of all time Scientists have figured out how to harness the power of electricity on a very large scale in massive power plants and on a very tiny scale in computer circuits This book includes geniuses like Benjamin Franklin Nikola Tesla and Thomas Edison Our modern ideas have been assembled over a long period as scientists built upon the work of their predecessors This book reveals what we have learned in the past what we have discovered in the present and what remains to be explored in the future Supplemental content includes an activity spread a substantial and highly detailed timeline and a list of key people with mini biographies

Atoms and Molecules Chris Woodford,Martin Clowes,2012-07-15 Greek philosophers first hypothesized that matter was composed of atoms but the theory would not resurface again until the late 17th century The idea that that atoms joined to form structures called molecules first appeared in the 19th century and helped explain why gases liquids and solids behave differently from one another In the 20th century subatomic particles were discovered electrons protons and neutrons and atomic structure was finally understood These breakthroughs led to the development of quantum theory and quantum mechanics This book details the inspiring and heroic discovery delving deeply into intriguing stories reviewing major scientific landmarks and introducing readers to the vivid men and women who helped discover and map the microscopic universe that is the atom Supplemental content includes an activity spread a substantial and highly detailed timeline and a list of key people with mini biographies

Gravity Chris Woodford,2012-07-15 Gravity is everywhere It is the force that keeps the earth orbiting around the sun Yet it has always been one of the most mysterious forces throughout human history This book explores some of the scientists responsible for what we know about gravity and how this knowledge has impacted modern society

Evolution Jen Green,2012-07-15 Fulfills the standards Culture Time Continuity and Change People Places and Environments Individuals Groups and Institutions Power Authority and Governance Global Connections and Civic Ideals and Practices from the National Council for the Social Studies Curriculum Standards for Middle School

Genetics Trevor Day,2012-07-15 In the 1800s an Australian monk named Gregor Mendel was experimenting on pea plants as he tried to learn how a single cell could grow into an entire

human Today we can see the results of his work in almost every aspect of modern medicine This book explores genetics through its long and controversial history to how its discoveries have shaped modern society
