This is the fifth year we have been able to capture the research and development efforts related to the Generalized Intelligent Framework for Tutoring GIFT community which at the writing of these proceedings has well over 1000 users in over 65 countries. We are proud of what we have been able to accomplish with the help of our user community. These proceedings are intended to document the evolutions of GIFT as a tool for the authoring of intelligent tutoring systems ITSs and the evaluation of adaptive instructional tools and methods.

Human Computer Interaction Handbook Julie A. Jacko, 2012-05-04. Winner of a 2013 CHOICE Outstanding Academic Title Award. The third edition of a groundbreaking reference, *The Human Computer Interaction Handbook: Fundamentals, Evolving Technologies, and Emerging Applications*, raises the bar for handbooks in this field. It is the largest, most complete compilation of HCI theories, principles, advances, case studies, and Intelligent Adaptive Systems Ming Hou, Simon Banbury, Catherine Burns, 2018-10-30. As ubiquitous as the atmosphere, intelligent adaptive systems IASs surround us in our daily lives. When designed well, these systems sense users and their environments so that they can provide support in a manner that is not only responsive to the evolving situation but unnoticed by the user. A synthesis of recent research and developments on IASs from the human factors (HF) and human computer interaction (HCI) domains, *Intelligent Adaptive Systems: An Interaction Centered Design Perspective* provides integrated design guidance and recommendations for researchers and system developers. The book explores a recognized lack of integration between the HF and HCI research communities which has led to inconsistencies between the research approaches adopted and a lack of exploitation of research from one field by the other. The authors integrate theories and methodologies from these domains to provide design recommendations for human machine developers. They then establish design guidance through the review of conceptual frameworks, analytical methodologies, and design processes for intelligent adaptive systems. The book draws on case studies from the military, medical, and distance learning domains to illustrate intelligent system design, to examine lessons learned, and to outline an interaction centered perspective for designing an IAS. The book details methodologies for understanding human work in complex environments and offers understanding about why and how optimizing human machine interaction should be central to the design of IASs. The authors present an analytical and design methodology as well as an implementation strategy that helps you choose the proper design framework for your needs. *Universal Access in Human Computer Interaction. Coping with Diversity* Constantine Stephanidis, 2007-08-24. This is the first of a three volume set that constitutes the refereed proceedings of the 4th International Conference on Universal Access in Human Computer Interaction (UAHCI 2007) held in Beijing, China. It covers designing for universal access, universal access methods, techniques, and tools, understanding motor
