Wright, Roy H. May Jr., 2023-06-23 This fifth volume in the Ecology and Ethics series integrates key concepts of the previous four volumes by addressing biocultural conservation through novel educational methods In Field Environmental Philosophy FEP the authors undertake two complementary tasks First they address a problematic facet of education as an indirect driver of a global change and biocultural homogenization Second they contribute to solve the former problems by introducing the FEP method as well as other educational approaches from around the world that value and foster conservation of biological and cultural diversity A particular emphasis is therefore on the integration of sciences arts humanities and ethics into educational practices that involve the participation of local communities with their diverse forms of ecological knowledge and practices The book is divided into four parts Part I introduces FEP concepts and practices that involve a 4 step cycle of transdisciplinary research poetic communication through composition of metaphors design of field activities guided with an ecological and ethical orientation and participation in biocultural conservation activities Part II exposes problems as well as solutions in formal education from preschool to higher education and non formal education to respect biocultural diversity Parts III IV provide case studies developed at long term socio ecological research LTSER sites botanical gardens and other platforms for non formal education that contribute to biocultural conservation. Psychology John A. Glover,Royce R. Ronning,2013-11-11 This volume represents a beginning effort to compile a history of educational psychology The project began innocuously enough several years ago when we decided to add mon material about the history of educational psychology to the undergraduate course we were teaching What seemed like a simple task became very complex as we searched in vain for a volume dealing with the topic We ended up drawing on various histories of psychology that devoted anywhere from a few paragraphs to several pages to the topic and on a very few articles addressing the issue We were startled frankly by the apparent lack of interest in the history of our field and decided to attempt to

compile a history ourselves As is the case with any edited volume the contributing authors deserve credit for its positive features They uniformly made every effort asked of them and taught us much about educational psychology Any errors or omissions are our responsibility alone The Rights of Nature Roderick Frazier Nash,1989-01-17 Charting the history of contemporary philosophical and religious beliefs regarding nature Roderick Nash focuses primarily on changing attitudes toward nature in the United States His work is the first comprehensive history of the concept that nature has rights and that American liberalism has in effect been extended to the nonhuman world A splendid book Roderick Nash has written another classic This exploration of a new dimension in environmental ethics is both illuminating and overdue Stewart Udall His account makes history come alive Sierra So smoothly written that one almost does not notice the breadth of scholarship that went into this original and important work of environmental history Philip Shabecoff New York Times Book Review Clarifying and challenging this is an essential text for deep ecologists and ecophilosophers Stephanie Mills Utne Reader The British National Bibliography Arthur James Wells,2006
