

## Why?

Metaphysics may go beyond the interests of ordinary science because it takes place **across several domains of science**.

- Topics that are too **general** to be encompassed by a single domain (causation)
- Topics where our pre-theoretic **intuitions** play a role in theory choice (primitive ontology, direction of time, direction of causation), suggesting the need to investigate the origin or reliability of these intuitions (psychology).
- Questions about **how domains relate**.

Philosophy is likely to have a more significant role to play.

There will be metaphysics of science not practiced by scientists.

Ellington. Each work is preceded by an expert Introduction by Ellington and is followed by a German-English List of Terms and an Index. **Metaphysics as Foundation** Paul A. Bogaard, Gordon Treash, Ivor Leclerc, 1993-01-01 The essays in this book examine the proposition that an interpretation of subjects and subjectivity from the ontological perspective first outlined by Alfred North Whitehead and elaborated by Ivor Leclerc provides the foundation that is essential in order to develop a philosophy of nature and human action. **The Metaphysical Foundations of Love** Anthony T. Flood, 2018-10-17 *The Metaphysical Foundations of Love*. Aquinas on Participation, Unity and Union offers a systematic treatment of St. Thomas Aquinas's account of the metaphysical relations of unity to union and unity to participation in God as the key structuring elements to the nature of love and friendship. In general, Aquinas identifies love as the source and summit of the life of each human being. Everything in the created realm issues forth from God's creative love, and the ultimate end of all human persons is the greatest possible union with God. Aquinas contends that the love of friendship allows for the greatest union between two persons; thus, the greatest union with God takes the form of friendship.

**Kant's Theory of Natural Science** Peter Plaass, 2012-12-06 Plaass's treatise stood at the beginning of a renewed wave of scholarship regarding Kant's Metaphysical Foundations of Natural Science MF Plaass argues that the MF represents an integral step in Kant's development between the two editions of the Critique of Pure Reason The MF repeats the Copernican turn using the conditions of subjectivity to derive the metaphysical determinations of matter as the object of natural science with the new method called metaphysical construction which simultaneously grounds the mathematizability of physics The translators provide background and analysis of Plaass's work extend it to include the body of the MF and offer a variation on the analysis of the relationship between mathematics and metaphysics in the MF They discuss its relevance for contemporary paradigm dependency approaches to the philosophy of science and for philosophical hermeneutics The book will be of interest to Kant specialists as well as to students of the philosophy of science in general

The Philosophy of John Dewey John Dewey, 1928 The Concept of Nature in Classical German Philosophy Luis Felipe Garcia, 2024-12-02 Classical German Philosophy has traditionally been understood as the period in the history of ideas in which the investigation of the human mind takes precedence over the investigation of the natural world This assessment has a twofold consequence On the one hand the philosophy of the period has been praised for its contributions to our understanding of multiple expressions of human rationality such as history art and religion On the other hand such a philosophy has been criticized for its obscure speculations alien to the standards of modern scientific cognition The philosophy of nature developed at the time has been accordingly dismissed as a piece of

outdated metaphysics Challenging this view the contributions collected in this book argue for the historical and contemporary relevance of the approaches to nature formulated at the time     *The History of Continua* Stewart Shapiro, Geoffrey Hellman, 2021 Mathematical and philosophical thought about continuity has changed considerably over the ages from Aristotle's insistence that a continuum is a unified whole to the dominant account today that a continuum is composed of infinitely many points This book explores the key ideas and debates concerning continuity over more than 2500 years     *Foundation for a Natural Morality* Edmund Wall, 2018-10-15 Few philosophers attempt to establish that there is an evaluative and moral realm They make these major assumptions without argument This plays into the hands of moral nihilists and certain other moral skeptics A major obstacle that prevents philosophers from developing such arguments is the long standing view that one cannot derive an ought from an is that is one cannot begin with purely descriptive non evaluative propositions and deduce an evaluative or moral proposition In this book Edmund Wall develops arguments for evaluative and moral principles His deductive reasoning begins with certain purely descriptive and non evaluative propositions concerning human nature establishing a basic moral principle of human life and a basic moral principle of knowledge By providing such deductive arguments for basic moral principles Wall makes considerable progress in establishing a sure foundation for morality He further develops his case by responding to a plethora of anticipated objections against his two arguments and by delineating the advantages of his own moral approach over a number of influential moral theories and competing accounts of moral reasoning     Nature Mathematized W. R. Shea, 1983 These remarks preface two volumes consisting of the proceedings of the Third International Conference on the History and Philosophy of Science of the International Union of History and Philosophy of Science The conference was held under the auspices of the Union The Social Sciences and Humanities Research Council of Canada and the Canadian Society for History and Philosophy of Science The meetings took place in Montreal Canada 25-29 August 1980 with Concordia University as host institution The program of the conference was arranged by a Joint Commission of the International Union of History and Philosophy of Science consisting of Robert E Butts Canada John Murdoch U S A Vladimir Kirsanov U S S R and Paul Weingartner Austria The Local Arrangements Committee consisted of Stanley G French Chair Concordia Michel Paradis treasurer McGill Franois Duchesneau Universite de Montreal Robert Nadeau Universite du Quebec a Montreal and William Shea McGill University Both committees are indebted to Dr G R Paterson then President of the Canadian Society for History and Philosophy of Science who shared his expertise in many ways Dr French and his staff worked diligently and efficiently on behalf of all participants The city of Montreal was as always the subtle mixture of extravagance charm warmth and excitement that retains her status as the jewel of Canadian cities The funding of major international conferences is always a problem
