Link Theory in Manifolds Uwe Kaiser, 2006-11-14 Any topological theory of knots and links should be based on simple ideas of intersection and linking In this book a general theory of link bordism in manifolds and universal constructions of linking numbers in oriented 3 manifolds are developed In this way classical concepts of link theory in the 3 spheres are generalized to a certain class of oriented 3 manifolds submanifolds of rational homology 3 spheres The techniques needed are described in the book but basic knowledge in topology and algebra is assumed The book should be of interest to those working in topology in particular knot theory and low dimensional topology *Foundations of Social Choice Theory* Jon Elster (red.), Aune Hylland, 1986 First published in 1986 this volume of essays offers an examination of the philosophical foundations of social choice theory in its context as the outgrowth of welfare economics The essays advance both criticisms and suggestions for alternative approaches **Three-Dimensional Link Theory and Invariants of Plane Curve Singularities. (AM-110), Volume 110** David Eisenbud, Walter D. Neumann, 2016-03-02 This book gives a new foundation for the theory of links in 3 space modeled on the modern development by Jaco Shalen Johannson Thurston et al of the theory of 3 manifolds The basic construction is a method of obtaining any link by splicing links of the simplest kinds namely those whose exteriors are Seifert fibered or hyperbolic This approach to link theory is particularly attractive since most invariants of links are additive under splicing Specially distinguished from this viewpoint is the class of links none of whose splice components is hyperbolic It includes all links constructed by cabling and connected sums in particular all links of singularities of complex plane curves One of the main contributions of this monograph is the calculation of invariants of these classes of links such as the Alexander polynomials monodromy and Seifert forms *Foundations of Early Childhood* Penny

Game-Theoretical Approaches with Constructive Type Theory Nicolas Clerbout, Shahid Rahman, 2015-07-08 This title links two of the most dominant research streams in philosophy of logic namely game theory and proof theory As the work s subtitle expresses the authors will build this link by means of the dialogical approach to logic One important aspect of the present study is that the authors restrict themselves to the logically valid fragment of Constructive Type Theory CTT The reason is that once that fragment is achieved the result can be extended to cover the whole CTT system The first chapters in the brief offer overviews on the two frameworks discussed in the book with an emphasis on the dialogical framework The third chapter demonstrates the left to right direction of the equivalence result This is followed by a chapter that demonstrates the use of the algorithm in showing how to transform a specific winning strategy into a CCT demonstration of the axiom of choice The fifth chapter develops the algorithm from CTT demonstrations to dialogical strategies This brief concludes by introducing elements of discussion which are to be developed in subsequent work
