*Handbook of Chemical Risk Assessment* Ronald Eisler, 2000-04-12 Written over a period of 17 years the Handbook of Chemical Risk Assessment exhaustively examines and analyzes the world literature on chemicals entering the environment from human activities The three volumes cover chemicals recommended by environmental specialists of the U S Fish and Wildlife Service and other resource managers The choices were based on the real or potential impact of each contaminant and on the knowledge available about their mitigation The information for each chemical includes source and use physical chemical and metabolic properties concentrations in field collections of abiotic materials and living organisms deficiency effects lethal and sublethal effects and proposed regulatory criteria for the protection of human health and sensitive natural resources Each chapter selectively reviews and synthesizes the technical literature on a specific priority contaminant and its effects on the environment Successful risk assessment relies heavily on extensive and well documented databases They often include too much or too little information about too many chemicals Of the hundreds of thousands of chemicals discharged into the environment only a small number have sufficient information to attempt preliminary risk assessment Sold only as a three volume set the Handbook of Chemical Risk Assessment provides you with the exact amount of information you need in a single resource

At the heart of environmental protection is risk assessment the likelihood of pollution from accidents the likelihood of problems from normal and abnormal operation of industrial processes the likely impacts associated with new synthetic chemicals and so on. Currently risk assessment has been very much in the news the risks from BSE and E coli and the public perception of risks from nuclear waste etc. This new publication explains how scientific methodologies are used to assess risk from human activities and the resultant effects on people and the environment. Understanding such risks supplies crucial information to frame legislation, manage major habitats, businesses and industries and create development programmes. Unique in combining the science of risk assessment with the development of management strategies. Covers science and social science, politics, economics, psychology aspects. Very timely risk assessment lies at the heart of decision making in various topical environmental questions: BSE, Brent Spar, nuclear waste.

A Comprehensive Guide to the Hazardous Properties of Chemical Substances Pradyot Patnaik, 2007-05-25. The definitive guide to the hazardous properties of chemical compounds. Correlating chemical structure with toxicity to humans and the environment and the chemical structure of compounds to their hazardous properties. A Comprehensive Guide to the Hazardous Properties of Chemical Substances Third Edition allows users to assess the toxicity of a substance even when no experimental data exists. Thus it bridges the gap between hazardous materials and chemistry. Extensively updated and expanded this reference. Examines organics, metals and inorganics, industrial solvents, common gases, particulates, explosives and radioactive substances covering everything from toxicity and carcinogenicity to flammability and explosive reactivity to handling and disposal practices. Arranges hazardous chemical substances according to their chemical structures and functional groups for easy reference. Includes updated information on the toxic, flammable and explosive properties of chemical substances. Covers additional metals in the chapters on toxic and reactive metals. Updates the threshold exposure limits in the workplace air for a number of substances. Features the latest information on industrial solvents and toxic and flammable gases. Includes numerous tables, formulas and a glossary for quick reference. Because it provides information that enables those with a chemistry background to perform assessments without prior data, this comprehensive reference appeals to chemists, chemical engineers, toxicologists and forensic scientists as well as industrial hygienists, occupational physicians, Hazmat professionals and others in related fields.
