Industrial Electrochemistry D. Pletcher, F.C. Walsh, 2012-12-06 The objective of this second edition remains the discussion of the many diverse roles of electrochemical technology in industry Throughout the book the intention is to emphasize that the applications though extremely diverse all are on the same principles of electrochemistry and electrochemical engineer based ing Those familiar with the first edition will note a significant increase in the number of pages The most obvious addition is the separate chapter on electrochemical sensors but in fact all chapters have been reviewed thoroughly and many have been altered substantially These changes to the book partly reflect the different view of a second author as well as comments from students and friends Also they arise inevitably from the vitality and strength of electrochemical technology in addition to important improvements in tech nology new electrolytic processes and electrochemical devices continue to be reported In the preface to the first edition it was stated the future for electrochemical technology is bright and there is a general expectation that new applications of electrochemistry will become economic as the world responds to the challenge of more expensive energy of the need to develop new materials and to exploit different chemical feedstocks and of the necessity to protect the environment The preparation of this second edition seven years after these words were written provided an occasion to review the progress of industrial electro chemistry

Chemical Criminalistics A. Maehly, L. Strömberg, 2012-12-06 In recent years a number of textbooks on forensic science have been published most of them directed to two groups viz the students of forensic science and the customers so to say prosecutors police officers judges defense lawyers In this book while covering fundamental concepts we try to go a little further and address also active workers in the field of forensic chemistry This is mainly achieved by relatively numerous literature references We hope that they may assist the forensic chemist in penetrating further into the subjects covered in this volume At the end of most chapters there are examples of actual cases handled at the Swedish National Laboratory of Forensic

Science Many of these cases could no doubt have been investigated in greater detail but they reflect the compromises often necessary for achieving a reasonable turnover Some parts of the book are quite strongly colored by the personal opinions of the authors We felt that these passages will give a little more life to the text than in other treatises of a more objective but possibly duller character The authors welcome all constructive criticism which will help to improve the book should there be a second edition

Conducting Polymers Toribio Fernandez Otero, 2015-11-25 Conducting polymers are organic conjugated materials that offer high electrical conductivity through doping by oxidation and a wide range of unique electromechanical and electrochromic characteristics These properties can be reversibly tuned through electrochemical reactions making this class of materials good biomimetic models and ideal candidates for the development of novel flexible and transparent sensing devices This book comprehensively summarises the current and future applications of conducting polymers with chapters focussing on electrosynthesis strategies theoretical models for composition dependent allosteric and structural changes composition dependent biomimetic properties novel biomimetic devices and future developments of zoomorphic and anthropomorphic tools Written by an expert researcher working within the field this title will have broad appeal to materials scientists in industry and academia from postgraduate level upwards

Surface Coatings—2 A. D. Wilson, 2012-12-06 The science and technology of surface coatings continues to advance Among the key areas are polymer chemistry as new binders are developed to meet increasingly stringent environmental demands testing and evaluation as the need to understand the factors affecting coatings performance becomes ever more intense and studies of that enduring problem corrosion of metal substrates from which coatings of ever improving effectiveness are emerging We have in this present volume of the series continued to cover

aspects of these numerous developments There are chapters on waterborne paint a subject of increasing environmental importance by J W Nicholson and by H J Streitberger and R P Osterloh on a new and sophisticated test method acoustic emission R D Rawlings and on anticorrosion coatings both organic W Funke and inorganic M C Andrade and A Macias Finally that topic of immense practical importance to paint technology pigmentation is covered in a chapter by the late T Entwistle All the authors have brought considerable experience in their chosen field of coatings technology to the preparation of their chapters all of which are timely reviews of developing topics We are grateful to each author for helping in the preparation of this volume and for putting their experience at the disposal of the wide audience for whom this book is intended **Subject**
