Factors Enrique Pimentel, 1994 *Handbook of Growth Factors* Enrique Pimentel, 1994 *Handbook of Growth Factors* Enrique Pimentel, 1994-06-02 Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and postreceptor mechanism of action and its role in neoplastic processes Regulatory peptides with growth factor like properties such as bombesin angiotensin endothelin atrial natriuretic factor vasoactive intestinal peptide and bradykinin are examined in depth Factors related to the growth of organs such as the prostate the heart and the mammary gland are also covered Handbook of Growth Factors Enrique Pimentel, 1994

Handbook of Growth Factors Enrique Pimentel, 1994-06-02 Handbook of Growth Factors Volume III is devoted to hematopoiesis and its regulation by endogenous factors with growth stimulatory and growth inhibitory properties The book provides detailed discussions on signaling agents related to the regulation of hematopoiesis including the interleukins the colony stimulating factors the interferons the tumor necrosis factors the erythropoietic growth factors the platelet derived growth factor the leukemia inhibitory factor and the transferrins The structure and function of each factor is covered in detail as well as its receptor and postreceptor mechanism of action and its possible role in neoplastic processes The book also explores the present state of the knowledge about megakaryocyte growth factors and macrophage derived growth factors

Transmembrane Receptors and Channels A.G. Lee, 1997-03-11 Volume 6 of Biomembranes covers transmembrane

receptors and channels A particularly important role for the membrane is that of passing messages between a cell and its environment Part I of this volume covers receptors for hormones and growth factors Here as in so many other areas of cell biology the application of the methods of molecular biology have led to the recognition of a number of families of receptors Typically such receptors contain an extracellular ligand binding domain a transmembrane domain and an intracellular catalytic domain whose activation as a result of ligand binding leads to generation of second messengers within the cell and stimulation of a range of cytosolic enzymes An alternative signaling strategy exploited in particular in the nervous system is to use ion channels to allow controlled movement of monovalent Na K or divalent Ca²⁺ cations in or out of the cell resulting in changes in membrane potential or alterations in the intracellular concentration of Ca²⁺ Part II of this volume is concerned with these ion channels and with other often simpler ion channel systems whose study can throw light on channel mechanism

Comprehensive Human Physiology Rainer Greger,Uwe Windhorst,2013-11-11 Comprehensive Human Physiology is a significantly important publication on physiology presenting state of the art knowledge about both the molecular mechanisms and the integrative regulation of body functions This is the first time that such a broad range of perspectives on physiology have been combined to provide a unified overview of the field This groundbreaking two volume set reveals human physiology to be a highly dynamic science rooted in the ever continuing process of learning more about life Each chapter contains a wealth of original data clear illustrations and extensive references making this a valuable and easy to use reference This is the quintessential reference work in the fields of physiology and pathophysiology essential reading for researchers lecturers and advanced students Colony-Stimulating Factors John M. Garland,2020-08-26 Concentrating on proven data and

adopting a structure function approach this text provides grounding for an intricate understanding of the molecular biology physiological mechanisms and routine clinical use in disease settings of colony stimulating factors CSFs This edition includes eight additional chapters with updates of recently discovered and established CSFs each indexed individually *Pesticides Documentation Bulletin* ,1966-10 **Development and Engineering of Dopamine Neurons** Jeroen Pasterkamp,Marten P. Smidt,J. Peter H. Burbach,2009-12-16 The neurotransmitter dopamine has just celebrated its 50th birthday The discovery of dopamine as a neuronal entity in the late 1950s and the notion that it serves in neurotransmission has been a milestone in the field of neuroscience research This milestone marked the beginning of an era that explored the brain as an integrated collection of neuronal systems that one could distinguish on basis of neurotransmitter identities and importantly in which one started to be able to pinpoint the seat of brain disease The mesodiencephalic dopaminergic mDA system previously designated as midbrain dopaminergic system has received much attention since its discovery The initial identification of dopamine as a neurotransmitter in the central nervous system CNS and its relevance to psychiatric and neurological disorders have stimulated a plethora of neurochemical pharmacological and genetic studies into the function of dopamine neurons and their projections In the last decade studies on gene expression and development have further increased the

knowledge of this neuronal population and have unmasked a new level of complexity The start of the molecular dissection of the mdDA system has been marked by the cloning and characterization of Nurrl and Pitx3 These transcription factors were shown to have a critical function during mdDA development These initial studies have been followed by the identification of many other proteins which have a crucial function in the creation of a dopamine neuron permissive region induction of precursors induction of terminal differentiation and finally maintenance of the mdDA neuronal pool *Principles of Tumors*

Leon P. Bignold, 2019-11-01 *Principles of Tumors A Translational Approach to Foundations* Second Edition provides a concise summary of translational interdisciplinary topics on the various aspects of tumors especially abnormalities in their cells their causes and effects on patients Topics discussed include how genomic abnormalities in tumors may result from the actions of carcinogens and how genomic changes determine the cell biological morphological abnormalities in tumor cell populations In addition the relationships between tumor cell genomics and therapeutic outcomes are described There are also supporting appendices on general bioscience including the principles of histology the cells and tissues of the body genetics pathology radiology and pharmacology This book gives a thorough detailed yet concise account of the main bioscience clinical and therapeutic aspects of tumors It emphasizes the translational aspects of research into tumors with extensive discussions of interdisciplinary issues The content in this book will be invaluable for researchers and clinicians involved in collaborative projects where it is necessary to understand fundamental issues in other branches of biomedicine Presents content that has been totally updated with the most recent developments of the field including new chapters on tumor imaging exams new surgical techniques immunotherapy gene therapy and several novel therapies using natural and synthetic compounds Presents translational approaches for every topic to improve conceptual insights for new research projects Covers a broad range of subjects making it easier for the reader to understand related fields Includes diagrams for complex topics to aid in understanding for non specialists **Using The Biological Literature** Diane Schmidt, Elisabeth B. Preimplantation Embryo Development Barry D. Bavister, 2012-12-06 This volume contains the Proceedings of the Sero Symposium on Pre implantation Embryo Development held in Newton Massachusetts in 1991 The idea for the symposium grew out of the 1989 Sero Symposium on Fertilization in Mammals at which preimplantation development was the predominant suggestion for a follow up topic This was indeed a timely subject in view of the recent resurgence of interest in this fundamental phase of embryogenesis and its relevance to basic research and applied fertility studies in humans food producing animals and endangered species The symposium brought together speakers from a broad range of disciplines in order to focus on key regulatory mechanisms in embryo development using a wide variety of animal models and on representative topics in human preimplantation embryogenesis The culmination of preimplantation development is a blastocyst containing the first differentiated embryonic tissues and capable of initiating and sustaining pregnancy The central objective of the symposium was to throw light on the regulation of cellular and molecular events underlying blastocyst formation It was particularly appropriate that the date of the symposium marked the 20th anniversary of the publication of the classic volume Biology of the Blastocyst the proceedings of an international workshop held in 1970 This book which summarized most of the information then available on this topic in mammals was edited by the pioneer in blastocyst research Dr Richard Blandau who was the guest speaker at the symposium
