Interspersed within each chapter are short hands-on tutorial exercises which give users a chance to explore the concepts and techniques being discussed and hear the results. higher level properties and behaviours of a system that obviously comes from the collective dynamics of that system's components. These properties are not directly deducible from the lower level motion of that system. Emergent properties are properties of the whole that are not possessed by any of the individual parts making up that whole. Such phenomena exist in various domains and can be described using complexity concepts and thematic knowledges. This book highlights complexity modelling through dynamical or behavioral systems. The pluridisciplinary purposes developed along the chapters are able to design links between a wide range of fundamental and applicative Sciences. Developing such links instead of focusing on specific and narrow researches is characteristic of the Science of Complexity that we try to promote by this contribution.
