Flash The Hunt For The Biggest Explosions In The Universe:

Flash! Govert Schilling, 2002-04-18 The origin and nature of gamma ray bursts is currently one of the greatest mysteries in astrophysics These tremendously powerful blasts produce more energy in a fraction of a second than our Sun does in ten billion years Since their accidental discovery by American spy satellites over thirty years ago astronomers have striven to understand these enigmatic explosions It is only recently thanks to an Italian Dutch satellite and powerful telescopes both on the ground and in space that the mystery is beginning to be unravelled Astronomers now realise that gamma ray bursts are probably related to the birth of black holes in extremely distant galaxies Flash describes the fast moving field of gamma ray burst research from the initial detection right up to the most recent discoveries Based on interviews with leading scientists this exciting book provides an inside view of the scientific challenges involved in unravelling the mystery of gamma ray bursts

Accessory to War: The Unspoken Alliance Between Astrophysics and the Military Neil deGrasse Tyson, Avis Lang, 2018-09-11 Extraordinary A feast of history an expert tour through thousands of years of war and conquest Jennifer Carson New York Times Book Review In this far reaching foray into the millennia long relationship between science and military power acclaimed astrophysicist Neil deGrasse Tyson and co author Avis Lang examine how the methods and tools of astrophysics have been enlisted in the service of war Spanning early celestial navigation to satellite enabled warfare Accessory to War is a richly researched and provocative examination of the intersection of science technology industry and power that will introduce Tyson's millions of fans to yet another dimension of how the universe has shaped our lives and our world

Tweeting the Universe Govert Schilling, Marcus Chown, 2011-11-01 In 140 pages two masterly popularisers present 140 explanations of the biggest questions in physics in the form of 10 or so tweets per page They set themselves the challenge of boiling down what is essential on each subject into sentences of 140 characters and the results are both entertaining and brilliantly informative Not a word is wasted The reader is not patronized and learns something on every page If only all science writing could be so precise and so economical Only science writers of a very high calibre could achieve such compression Marcus Chown the finest cosmology writer of our day Matt Ridley has known the Dutch writer Govert Schilling for twenty years Schilling pioneered this very swift form of explanation in a Dutch newspaper and suggested to Chown that they collaborate on bringing it to a wider audience Tweeting the Universe is unlike any other science book
