**Eicosanoids** Giancarlo C. Folco, Bengt Samuelsson, Jacques Maclouf, G.P. Velo, 2013-06-29 Proceedings of a NATO ASI held in Erice Italy April 27 May 1 1995      Leukotrienes Ian Rodger, Jack H. Botting, Sven-Erik Dahlén, 2012-12-06 In the two decades since the elusive slow reacting substance of anaphylaxis SRS A was identified as a product of the action of the 5 lipoxygenase enzyme on arachidonic acid it has been well established that the leukotrienes are key mediators of both allergy and inflammation Their release by allergen or other challenge has been demonstrated in the lungs of asthmatic subjects and measurement of urinary leukotriene concentrations in such patients has been shown to be a valuable non invasive indicator Significant progress has been made towards the characterization of the leukotriene receptor subtypes exemplified by the cloning of the LTB<sub>4</sub> receptor earlier this year Coupled with this there has been a continued elucidation of signal transduction mechanisms underlying receptor activation Consequent upon these advances has been the development of potent antagonists of the CysLT receptor J and both these and inhibitors of leukotriene biosynthesis have entered clinical practice in the therapy of asthma In this clinical setting antagonists of the CysLTJ receptor have been shown to be an effective therapy in chronic asthmatics against antigen and exercise induced bronchoconstriction and in aspirin intolerant asthmatics The advent of this new class of agents promises to change the way in which asthmatic patients are currently treated      Novel Inhibitors of Leukotrienes Giancarlo Folco, Bengt Samuelsson, Robert C. Murphy, 2012-12-06 Many new antileukotriene drugs are now marketed as antiasthma drugs and represent the first new drugs in this field since the 1970s This book covers the steps that have led to the discovery and development of these new drugs and offers detailed descriptions of their clinical applications The review chapters on the main aspects of basic and applied leukotriene research are written by leading specialists in the field and the volume takes a new approach in presenting information of particular interest to both scientists and clinicians in the fields of asthma inflammation and allergic diseases      Molecular, Cellular, and Clinical Aspects of Angiogenesis Michael E. Maragoudakis, 2012-12-06 There has been an explosion of research activity related to angiogenesis in recent years and hundreds of laboratories worldwide are actively involved in many aspects of angiogenesis The literature on angiogenesis increases exponentially every year and more than 16 000 peer reviewed articles have been published the past 25 years which are scattered in basic science and clinical journals The complexity of the cascade of events leading to new vessel formation from preexisting ones has challenged scientists in cell biology biochemistry physiology pharmacology molecular biology developmental biology and other fields With their multidisciplinary approach and the powerful new techniques that have been developed the progress in understanding angiogenesis has been impressive indeed Only 12 years ago the mention of an angiogenic factor caused skepticism Today we have the complete amino acid sequence and their genes cloned for at least 9 angiogenic factors Many laboratories are studying their role in angiogenesis and several biotechnology firms have a keen interest in commercial developments relative to these molecules The role of extracellular matrix components in angiogenesis

and the interaction of endothelial cells with other cell types such as pericytes smooth muscle cells and inflammatory cells have been studied by other groups This rapid expansion is the result of a realization that in many disease states a common underlying pathology is a derangement in angiogenesis

**Recent Advances in Prostaglandin, Thromboxane, and Leukotriene Research** Helmut Sinzinger, Bengt Samuelsson, Sir John R. Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11 The International Symposium on Prostaglandins and Related Compounds first held in Vienna 1972 revisited the city after 24 years for the 10TH Symposium For the many researchers working in this multi disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world This scientific exchange was largely encouraged by the unseasonably cold and rainy weather For the first time there was quite a large attendance from the former Communist countries Eugene Garfield prepared a key note address delivered during the meeting The Scientist 1996 12 reviewing the contribution of the Nobel Laureates U S von Euler l R Vane S K Bergstrom and B I Samuelsson discussing the relevance of the more than 40 000 papers in this area published since 1991 Overall there is still a rapidly growing interest and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting Beside the lectures there were 19 workshops covering nearly all the topics of key interest All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands Special thanks to Dr Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time Looking forward to seeing all of you again in Florence in 1999 hopefully with much more sun
