Evaluating Welfare And Training Programs:

Evaluating Welfare and Training Programs Charles F. Manski, Irwin Garfinkel, 1992 Almost everyone would like to see the enactment of sound practical measures to help disadvantaged people get off welfare and find jobs at decent wages and over the past quarter century federal and state governments have struggled to develop just such programs How do we know whether they are having the hoped for effect How do we know whether these vast outlays of money are helping the people they are designed to reach All welfare and training programs have been subject to professional evaluations including social experiments and demonstrations designed to test new ideas This book reviews what we have discovered from past assessments and suggests how welfare and training programs should be planned for the 1990s The authors of this volume each a recognized expert in the evaluation of social programs do more than summarize what we have learned so far They clarify why the issue of the proper conduct and interpretation of evaluations has itself been a subject of continuing controversy In part the problem is organizational requiring the integrated efforts of social scientists public officials and the professionals who execute evaluations In addition there is a dispute about scientific method should evaluators try to understand the complex social processes that make programs succeed or fail or should they focus on inputs and outputs treating the programs themselves as black boxes whose machinery remains hidden **Evaluating Welfare and Training Programs** will be important for policy researchers and evaluation professionals social scientists concerned with evaluation methods public officials working in social policy and students of public policy economics and social work

Evaluating the Impact of Development Projects on Poverty Judy L. Baker, 2000 Despite the billions of dollars spent on development assistance each year there is still very little known about the actual impact of projects on the poor There is broad evidence on the benefits of economic growth investments in human capital and the provision of safety nets for the poor But for a specific program or project in a given country is the intervention producing the intended benefits and what was the overall impact on the population Could the program or project be better designed to achieve the intended outcomes Are resources being spent efficiently These are the types of questions that can only be answered through an impact evaluation an approach which measures the outcomes of a program intervention in isolation of other possible factors This handbook seeks to provide project managers and policy analysts with the tools needed for evaluating project impact It is aimed at readers with a general knowledge of statistics For some of the more in depth statistical methods discussed the reader is referred to the technical literature on the topic Chapter 1 presents an overview of concepts and methods Chapter 2 discusses key steps and related issues to consider in implementation Chapter 3 illustrates various analytical techniques through a case study Chapter 4 includes a discussion of lessons learned from a rich set of good practice evaluations of poverty projects which have been reviewed for this handbook
