Peliti, 2013-06-29 The workshop Biologically Inspired Physics was organized with the support of the NATO Scientific Affairs Division and the Directorate General for Science Research and Development of the Commission of the European Communities in order to review some subjects of physics of condensed matter which are inspired by biological problems or deal with biological systems but which address physical questions The main topics discussed in the meeting were 1 Macromolecules In particular proteins and nucleic acids Special emphasis was placed on modelling protein folding where analogies with disordered systems in condensed matter glasses spin glasses were suggested It is not clear at this point whether such analogies will help in solving the folding problem Interesting problems in nucleic acids in particular DNA

deal with the dynamics of semiflexible chains with torsion and the relationship between topology and local structure They arise from such biological problems as DNA packing or supercoiling 2 Membranes This field has witnessed recent progress in the understanding of the statistical mechanics of fluctuating flexible sheets such as lipid bilayers It appears that one is close to understanding shape fluctuations in red blood cells on a molecular basis Open problems arise from phenomena such as budding or membrane fusion Experiments on model systems such as vesicle systems or artificial lipids have great potential Phenomena occurring inside the membrane protein diffusion ionic pumps were only discussed briefly **1998 IEEE**

**Conference on Electrical Insulation and Dielectric Phenomena**, 1998-10 This work discusses research done in dielectric phenomena and measurements Contents include ageing dielectrics surface flashover polarization phenomena and measurement techniques **Nonlinearity in Energy Harvesting Systems** Elena Blokhina, Abdelali El Aroudi, Eduard

Alarcon, Dimitri Galayko, 2016-11-10 This book is a single source guide to nonlinearity and nonlinear techniques in energy harvesting with a focus on vibration energy harvesters for micro and nanoscale applications The authors demonstrate that whereas nonlinearity was avoided as an undesirable phenomenon in early energy harvesters now it can be used as an essential part of these systems Readers will benefit from an overview of nonlinear techniques and applications as well as deeper insight into methods of analysis and modeling of energy harvesters employing different nonlinearities The role of nonlinearity due to different aspects of an energy harvester is discussed including nonlinearity due to mechanical to electrical conversion nonlinearity due to conditioning electronic circuits nonlinearity due to novel materials e g graphene etc Coverage includes tutorial introductions to MEMS and NEMS technology as well as a wide range of applications such as nonlinear oscillators and transducers for energy harvesters and electronic conditioning circuits for effective energy processing **Polymers in Energy Conversion and Storage** Inamuddin, Mohd Imran Ahamed, Rajender Boddula, Tariq A.
