Elias, 2013-11-11 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect

without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions

**Functional Polymer Films, 2 Volume Set** Wolfgang Knoll, Rigoberto C. Advincula, 2013-02-12 Very thin film materials have emerged as a highly interesting and useful quasi 2D state functionality They have given rise to numerous applications ranging from protective and smart coatings to electronics sensors and display technology as well as serving biological analytical and medical purposes The tailoring of polymer film properties and functions has become a major research field As opposed to the traditional treatise on polymer and resin based coatings this one stop reference is the first to give readers a comprehensive view of the latest macromolecular and supramolecular film based nanotechnology Bringing together all the important facets and state of the art research the two well structured volumes cover film assembly and deposition functionality and patterning and analysis and characterization The result is an in depth understanding of the phenomena ordering scale effects fabrication and analysis of polymer ultrathin films This book will be a valuable addition for Materials Scientists Polymer Chemists Surface Scientists Bioengineers Coatings Specialists Chemical Engineers and Scientists working in this important research field and industry

**Macromolecules** Hans-Georg Elias, 2013-06-29 Like so many of its kind this textbook originated from the requirements of teaching While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate graduate and postgraduate levels at Swiss Federal Institute of Technology at Zurich 1960 1971 I needed a one volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science This first English edition is based on the third German edition 1975 which is about 40% different from the first German edition 1971 a result of rapid progress in macromolecular science and the less rapid education of the writer This text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of macro molecules Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before syntheses For example it is difficult to understand equilibrium polymerization without knowledge of solution thermody of the glass temperature etc
