Embodied Theories:

What can we make of theories of embodiment and the role of the human mirror neuron system? Analia Arevalo, Juliana Baldo, Fernando González-Perilli, Agustín Ibanez, 2016-03-09 In recent years work surrounding theories of embodiment and the role of the putative mirror neuron system MNS in humans has gained considerable attention. If humans have developed a network of neurons that fire in response to other beings' actions as has been shown in macaques, this system could have vast implications for all kinds of cognitive processes unique to humans such as language learning, empathy, and communication in general. The goal of tapping into and understanding such a system is a fascinating yet challenging one. One form of embodiment, embodied linguistics, suggests that the way we process linguistic information is linked to our physical experience of the concept conveyed by each word. The interaction between these cognitive systems, i.e. language and motor processing, may occur thanks to the firing of neurons making up the MNS. The possible interdependence between different cognitive systems has implications for healthy as well as pathological profiles and in fact work in recent years has also explored the role of embodiment and/or the MNS in clinical populations such as stroke, Parkinson's Disease, Alzheimer's Disease, and Autism among others. Research on embodiment and/or the MNS has been approached with a number of different methodologies but the results obtained with these different methodologies have not been entirely consistent, generating doubts regarding the theories. The question has been raised as to what this line of inquiry can gain from the types of evidence contributed by functional neuroimaging methods carried out with healthy volunteers versus behavioral or lesion/symptom mapping methods employed with neurologically compromised individuals. Of particular interest are the clinical applications of this line of research. If indeed a system exists which reflects a tight link between, for example, the human language and motor systems, then the obvious challenge is to tap into this system to create useful therapies that can provide rehabilitation where damage has occurred. This Research Topic brought together work conducted with healthy and patient populations using several behavioral and imaging techniques as well as insightful commentaries and opinion pieces. We believe the combined work of the participating authors is an important contribution to this intriguing line of research and an excellent point of reference for future work.

An Introduction to Post-Keynesian and Marxian Theories of Value and Price Peter M. Lichtenstein, 2017-01-20 Peter M. Lichtenstein believes that any social economic theory of capitalism must begin with a theory of value and price. Dismissing the neoclassical school, he turns to post-Keynesian and Marxian economics with their coherent and consistent theories of value and price based on concrete objective circumstances. The development of these theories is the author's aim because he believes that this approach comes much closer than neoclassical theory to capturing the essence of a capitalism economy. This book, first published in 1983, is addressed to economics students, especially to those studying microeconomics or the history of economic thought, and to economists seeking an overview of these issues.

Imagery and Text Mark Sadoski, Allan Paivio, 2013 *Imagery and Text: A Dual Coding Theory of Reading and Writing* presents for the first

time a unified theory of both reading and writing that derives from and is completely consistent with the Dual Coding Theory of cognition one of the most influential and empirically sound theories of cognition ever developed This is the first book to take a systematic theoretical approach to all of the central issues of literacy including decoding comprehension and memory in reading and planning drafting and reviewing in writing Additionally theoretical accounts are provided for such profound and elusive literacy concepts as meaning engagement inspiration and persona Dual Coding Theory is unique in theorizing how both verbal and nonverbal cognition are woven throughout all aspects of literacy An outstanding advancement in understanding literacy Imagery and Text A Dual Coding Theory of Reading and Writing Explains the major aspects of both reading and writing from an empirically well established cognitive theory that embraces both language and mental imagery emphasizing the powerful role of nonlinguistic knowledge and mental imagery in literacy Offers a human alternative to current computer based theories of cognition and literacy derived from artificial intelligence treating literacy as an essentially human activity that includes imagery and affect Provides moment by moment accounts of both the reading process and the writing process and comparisons with other theories and Presents an extensive review of educational research on the application of dual coding theory

Contained Empowerment and the Liminal Nature of Feminisms and Activisms Victoria A. Newsom,2022-12-19 *Contained Empowerment and the Liminal Nature of Feminisms and Activisms* examines the processes by which activist

successes are limited and outlines a theoretical framing of the liminal and temporal limits to social justice efforts as contained empowerment With a focused lens on the third wave and contemporary forms of feminism the author investigates feminist activity from the early 1990s through responses and reactions to the overturning of Roe v Wade in 2022 and contrasts these efforts with anti feminist white supremacist and other structural normalizing efforts designed to limit and repress women s gendered and reproductive rights This book includes analyses of celebrity activism girl power transnational feminist NGOs digital feminisms and the feminist mimicry applied by practitioners of neo liberal and anti feminism Victoria A Newsom concludes that the contained nature of feminist empowerment illustrates how activists must engage directly with intersectional challenges and address the multiplicities of structural oppressions in order to breach containment **The Ontology of Emotions** Hichem Naar,Fabrice Teroni,2018 A pioneering investigation into the nature of emotions bringing together important questions in ontology metaphysics and philosophy of mind Leading scholars explore a neglected aspect of the philosophy of emotion paving the way for new advances in research This book will be important for those working in the field of emotions *International Handbook of Mathematics Teacher Education: Volume 2* ,2019-12-16 This second edition of the International Handbook of Mathematics Teacher Education builds on and extends the topics ideas in the first edition while maintaining the themes for each of the volumes Collectively the authors look back beyond and within the last 10 years to establish the state of the art and continuing and new trends in mathematics teacher and mathematics teacher educator education and look forward regarding possible avenues for teachers teacher educators researchers and policy makers to consider to enhance and or further investigate mathematics teacher and teacher educator learning and practice in particular The volume editors provide introductions to each volume that highlight the subthemes used to group related chapters which offer meaningful lenses to see important connections within and across chapters Readers can also use these subthemes to make connections across the four volumes which although presented separately include topics that have relevance across them since they are all situated in the common focus regarding mathematics teachers Volume 2 Tools and Processes in Mathematics Teacher Education describes and analyze various promising tools and processes from different perspectives aimed at facilitating the mathematics teacher learning and development It provides insights of how mathematics teacher educators think about and approach their work with teachers Thus as the second volume in the series it broadens our understanding of the mathematics teacher and their learning and teaching *The Nature of Masculinity* Steve Garlick,2016-10-11 Social theorists have argued that as the complexity of our ecosystems becomes more apparent the line between nature and culture human and nonhuman and technology and bodies becomes less distinct Yet contemporary masculinity studies has generally failed to incorporate this new way of thinking In this penetrating analysis of the relationship between gender and nature Steve Garlick proposes that masculinity is best understood as a technology that shapes both our engagement with the natural world and how we define freedom Extending the work of the Frankfurt School

and Heidegger's critique of modern technology *The Nature of Masculinity* draws on case studies and new materialist theories to argue that the essence of technology is not in mechanical devices but in a particular relationship to natural forces Within this critical framework masculinity is a technology of embodiment and freedom does not lie in the domination of nature but rather in fostering a new relation to it

Cognitive Science and the New Testament István Czachesz, 2017 Over the last few decades our knowledge of how the human mind and brain works increased dramatically The field of cognitive science enables us to understand religious traditions rituals and visionary experiences in novel ways This has implications for the study of the New Testament and early Christianity How people in the ancient Mediterranean world remembered sayings and stories what they experienced when participating in rituals how they thought about magic and miracle and how they felt and reasoned about moral questions all of that can be now better understood with the help of insights from cognitive science Istvan Czachesz argues that the field of New Testament Studies witnesses the beginning of a cognitive turn He surveys relevant developments in the Cognitive Science of Religion and explores the field of cognitive and behavioral sciences in search of opportunities of gaining new insights about biblical materials Czachesz presents some methodological tools and initial steps together with a large number of examples of applying the cognitive approach to the New Testament and related ancient literature

The Art of Art History Donald Preziosi, 1998 What is art history Why how and where did it originate and how have its aims and methods changed over time The history of art has been written and rewritten since classical antiquity Since the foundation of the modern discipline of art history in Germany in the late eighteenth century debates about art and its histories have intensified Historians philosophers psychologists and anthropologists among others have changed our notions of what art history has been is and might be This anthology is a guide to understanding art history through a critical reading of the field's most innovative and influential texts over the past two centuries Each section focuses on a key issue aesthetics style history as an art iconography and semiology gender modernity and postmodernity deconstruction and museology More than thirty readings from writers as diverse as Winckelmann Kant Gombrich Warburg Panofsky Heidegger Lisa Tickner Meyer Schapiro Jacques Derrida Mary Kelly Michel Foucault Rosalind Krauss Louis Marin Margaret Iversen and Nestor Canclini are brought together and Donald Preziosi's introductions to each topic provide background information bibliographies and critical elucidations of the issues at stake His own concluding essay is an important and original contribution to scholarship in the field From the pre-publication reviews Until now anthologies about the history of art have tended to be worthy yet inert plotting a linear evolution from the great precursors Vasari Winckelmann to the founding fathers of the modern discipline Wolfflin Riegl Panofsky to the achievements and refinements of today's scholarship The texts that Donald Preziosi has brought together provide something far more challenging the juxtapositions and alignments between individual essays point the reader towards unresolved problems ongoing debates and paths not taken or not taken yet In place of the consoling tale of intellectual progress the collection defamiliarizes the whole field and opens up a space for

radical reflection on its basic procedures and assumptions. Definitely the best introduction to art history currently available. Professor Norman Bryson, Harvard University. Donald Preziosi has prepared an anthology from the Greek a collection of flowers of art history. His bouquet contains representatives from the discipline's two hundred year history arranged in standard and innovative methodological categories. Within each the readings selected provide stimulating congruencies and contradictions that will inspire productive debate and contemplation. But what makes this anthology more than an arresting assemblage is the author's critical stance toward what he has wrought. His introduction and concluding chapter write around and under the subjects presented emphasizing the art of art history its kinship with modernity's post Enlightenment project and its collaboration with the rise of nationalism. Thus the discipline's past is probed and questioned and made relevant for its present and future. The whole thereby addresses without healing or concealing the disciplinary ruptures of modernism. The book might also have explored further nature of art history's history within the emergent discourse of post colonialism and the globalization of culture. Yet the many new perspectives it does offer help to re present the discipline for its readers students teachers and curators for other areas of humanistic inquiry which are being subject to similar critiques and for artists and the larger art community for whom history narrative and an accounting of art's past have once again become vital issues. Professor Robert S Nelson, Professor of Art History and Chair Committee for the History of Culture, University of Chicago. Rather than focusing on its Vasarian moment or on the later academic institutionalization of art history in the 19th and 20th centuries, Donald Preziosi in *The Art of Art History* constructs a reading of this hegemonic and reductive practice of making the visible legible as one that is inextricably tied to the museographic paradigm of late 18th and early 19th centuries. This shift he sees as equivalent in importance to the brought by the invention of perspective. But the author goes further than to underline the implication of art history with the premises of modernity. He makes a strong case in a vivid and inspiring prose for a tighter equation between art history and modernity an equation grounded in his insightful considerations and meteoric formulations of the epistemological setting rhetorical operations political colonialist aims and schizophrenic yet all invasive aestheticization of knowledge that in the last two centuries have fashioned what we will no longer dare to call the discipline of art history. The result is a flamboyant book that offers anything but a celebratory reading of art history. It does not constitute an articulation of canonical texts or an up to date menu of art historical currents methods or trends. Yet it manages to avoid none of these dimensions. Art history is not envisaged as the learned discourse of modernity on a specific class of objects nor is it reduced to a genealogy of outstanding artist subjects and their volatile constellations of contemporary subjects readers. It becomes a practice wherein objects and subjects relate and relations often crystallize under the unrecognized aegis of the fetish this Other of art since Preziosi concisely defines art as the anti fetish fetish. Far from the fantastic neutrality that is traditionally found in the format of such an historiographic endeavour, Preziosi frames his selection of text and threads through them with an array of different strategic voices superimposed to stress a spatial figure he is keen

to discern in order to elaborate a strong polemic position that situates art history as an enduring and well disguised fictional genre In the process the author courageously takes on the paradox that is at the core of his project to introduce students to the coming out of art history as art one that is not necessarily meant to be our coming out of it but that certainly well establishes our motives to continue to shake its grounds and its multi storied apparatus Professor Johanne Lamoureux University of Montreal
