Performance Modeling of Communication Networks with Markov Chains Jeonghoon Mo, 2022-05-31 This book is an introduction to Markov chain modeling with applications to communication networks It begins with a general introduction to performance modeling in Chapter 1 where we introduce different performance models We then introduce basic ideas of Markov chain modeling Markov property discrete time Markov chain DTMC and continuous time Markov chain CTMC We also discuss how to find the steady state distributions from these Markov chains and how they can be used to compute the system performance metric The solution methodologies include a balance equation technique limiting probability technique and the uniformization We try to minimize the theoretical aspects of the Markov chain so that the book is easily accessible to readers without deep mathematical backgrounds We then introduce how to develop a Markov chain model with simple applications a forwarding system a cellular system blocking slotted ALOHA Wi-Fi model and multichannel based LAN model The examples cover CTMC DTMC birth death process and

non birth death process We then introduce more difficult examples in Chapter 4 which are related to wireless LAN networks the Bianchi model and Multi Channel MAC model with fixed duration These models are more advanced than those introduced in Chapter 3 because they require more advanced concepts such as renewal reward theorem and the queueing network model We introduce these concepts in the appendix as needed so that readers can follow them without difficulty We hope that this textbook will be helpful to students researchers and network practitioners who want to understand and use mathematical modeling techniques Table of Contents Performance Modeling Markov Chain Modeling Developing Markov Chain Performance Models Advanced Markov Chain Models Innovations in Information Systems Modeling: Methods and Best Practices Halpin, Terry, Krogstie, John, Proper, Erik, 2009-03-31 Covers central topics in information systems modeling and architectures Includes the latest developments in information systems modeling methods and best practices

Multiple Criteria Decision Making Applications in Environmentally Conscious Manufacturing and Product Recovery Surendra M. Gupta, Mehmet Ilgin, 2017-10-17 In order to ensure environmentally responsible production and disposal of products local governments are imposing stricter environmental regulations some of which even require manufacturers to take back their products at the end of the product's useful life These government regulations together with increasing environmental awareness have forced manufacturers to invest in environment conscious manufacturing The multiple Criteria Decision Making Techniques presented in this book can be employed to solve the problems of environment conscious manufacturers in product design logistics disassembly and remanufacturing **Intelligent Knowledge-Based Systems** Cornelius T. Seeing Between the Pixels Christine Strothotte, Thomas Strothotte, 2012-12-06 Pictures are at the heart of how we communicate with computers emblematic of our current fascination with multimedia and web based computing Nevertheless most of us know far less about pictures and the way in which they work than we know about the text that often accompanies them In an attempt to understand pictures perhaps the most fundamental question we can ask is What is a picture What is it that objects as diverse as icons bar charts paintings and photographs have in common that makes us refer to all of them as pictures And what is it about pictures that convinces us to use them instead of or in addition to text We often talk about how pictures depict things But even the process of depiction seems to differ from one picture to another On a computer we may use a paint system to guide a virtual brush over the screen a video camera to capture a live image a spread sheet to automatically generate a corresponding bar chart or a rendering system that models the interactions of synthetic lights objects and cameras Is there some underlying property that these processes all share Computer scientists are used to thinking of pictures in terms of their representation an array of pixels a list or hierarchy of graphics primitives or even a program written in a language such as PostScript

Computer Applications in Production and Engineering Frank Plonka, Gustav J. Olling, 1997-10-31 In the latter half of the 20th century forces have conspired to make the human community at last global The easing of tensions between major nations the expansion of trade to worldwide markets widespread travel and cultural exchange pervasive high speed communications and automation the explosion of knowledge the streamlining of business and the adoption of flexible methods have changed the face of manufacturing itself and of research and education in manufacturing The acceptance of the continuous improvement process as a means for organizations to respond quickly and effectively to swings in the global market has led to the demand for individuals educated in a broad range of cultural organizational and technical fields and capable of absorbing and adapting required knowledge and training throughout their

careers No longer will manufacturing research and education focus on an industrial sector or follow a national trend but rather will aim at enabling international teams of companies to cooperate in rapidly designing prototyping and manufacturing products The successful enterprise of the 21st century will be characterized by an organizational structure that efficiently responds to customer demands and changing global circumstances a corporate culture that empowers employees at all levels and encourages constant communication among related groups and a technological infrastructure that fully supports process improvement and integration In changing itself to keep abreast of the broader transformation in manufacturing the enterprise must look first at its organization and culture and thereafter at supporting technologies

The Handbook of Information Systems Research Whitman, Michael, Woszczynski, Amy, 2003-07-01 With the quantity and quality of available works in Information Systems IS research it would seem advantageous to possess a concise list of exemplary works on IS research in order to enable instructors of IS research courses to better prepare students to publish in IS venues To that end The Handbook of Information Systems Research provides a collection of works on a variety of topics related to IS research This book provides a fresh perspective on issues related to IS research by providing chapters from world renowned leaders in IS research along with chapters from relative newcomers who bring some interesting and often new perspectives to IS research This book should serve as an excellent text for a graduate course on IS research methods
