*Polymer Science: A Comprehensive Reference*, 2012-12-05. The progress in polymer science is revealed in the chapters of *Polymer Science: A Comprehensive Reference* Ten Volume Set. In Volume 1, this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films. Volume 2 addresses new characterization techniques such as high resolution optical microscopy, scanning probe microscopy, and other procedures for surface and interface characterization. Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture, the development of metallocene and post metallocene catalysis for olefin polymerization, new ionic polymerization procedures, and atom transfer radical polymerization, nitroxide mediated polymerization, and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods. Volume 4 is devoted to kinetics, mechanisms, and applications of ring opening polymerization of heterocyclic monomers and cycloolefins, ROMP, as well as to various less common polymerization techniques. Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5. Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates.
