Chemical engineering is a branch of engineering dealing with processes in which materials undergo changes in their physical or chemical state. These changes may concern size, energy, content, composition, and/or other application properties. Chemical engineering deals with many processes belonging to chemical industry or related industries: petrochemical, metallurgical, food, pharmaceutical, fine chemicals, coatings and colors, renewable raw materials, biotechnological, etc., and finds application in manufacturing of such products as acids, alkalis, salts, fuels, fertilizers, crop protection agents, ceramics, glass, paper, colors, dyestuffs, plastics, cosmetics, vitamins, and many others. It also plays a significant role in environmental protection, biotechnology, nanotechnology, energy production, and sustainable economical development.

The Theme on Chemical Engineering and Chemical Process Technology deals in five volumes and covers several topics such as Fundamentals of Chemical Engineering, Unit Operations, Fluids, Unit Operations, Solids, Chemical Reaction Engineering, Process Development, Modeling, Optimization, and Control, Process Management, The Future of Chemical Engineering, Chemical Engineering Education, Main Products, which are then expanded into multiple subtopics each as a chapter. These five volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers, and NGOs.
