Skinner, Thomas Kindermann, Andrew Mashburn, 2019-05-09 Everything you always wanted to know about theories meta theories methods and interventions but didn't realize you needed to ask This innovative textbook takes advanced undergraduate and graduate students behind the

curtain of standard developmental science so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. Based on the authors more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community full of arguments, doubts and insights that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines such as industrial, organizational, social and community psychology and applied professions that rely on developmental training such as education, social work, counseling, nursing, health care and business will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan developmental systems perspective.
