Oakes, 2023-12-14 This book provides an accessible but rigorous introduction to asymptotic theory in parametric statistical models Asymptotic results for estimation and testing are derived using the moving alternative formulation due to R A Fisher and L Le Cam Later chapters include discussions of linear rank statistics and of chi squared tests for contingency table analysis including situations where parameters are estimated from the complete ungrouped data This book is based on lecture notes prepared by the first author subsequently edited expanded and updated by the second author Key features Succinct account of the concept of asymptotic linearity and its uses Simplified derivations of the major results under an assumption of joint asymptotic normality Inclusion of numerical illustrations practical examples and advice Highlighting some unexpected consequences of the theory Large number of exercises many with hints to solutions Some facility with linear algebra and with real analysis including epsilon delta arguments is required Concepts and results from measure theory are explained when used Familiarity with undergraduate probability and statistics including basic concepts of estimation and hypothesis testing is necessary and experience with applying these concepts to data analysis would be very helpful

Charemza, Krystyna Strzala, 2012-12-06 In March 1998 the European Union formally launched the accession process that will lead to a significant enlargement of the Union So far ten countries from Central Europe Bulgaria the Czech Republic Estonia Hungary Latvia Lithuania Poland Romania the Slovak Republic and Slovenia have submitted their applications for EU membership This unique process immediately attracted attention of economists and policy makers Nevertheless it can be noticed that among numerous results already published there is a distinctive shortage of books and papers in which quantitative research methods are applied This is to a large extent justified by the fact that the transition and accession processes are new to the economic sciences their methodology is not well researched statistical data for the Central and East European countries are scarce and not always reliable and generally quantitative approach seems to be a risky and uncertain business All these all problems can also be seen as a challenge rather than an obstacle With this on mind we have decided to clarify the status quo by organising a research seminar which focused on the methodology and quantitative analysis of the Central and East European transition and pre accession processes The seminar East European
