Handbook Of Metadata, Semantics And Ontologies Miguel-angel Sicilia,2013-12-17 Metadata research has emerged as a discipline cross cutting many domains focused on the provision of distributed descriptions often called annotations to Web resources or applications Such associated descriptions are supposed to serve as a foundation for advanced services in many application areas including search and location personalization federation of repositories and automated delivery of information Indeed the Semantic Web is in itself a concrete technological framework for ontology based metadata For example Web based social networking requires metadata describing people and their interrelations and large databases with biological information use complex and detailed metadata schemas for more precise and informed search strategies There is a wide diversity in the languages and idioms used for providing meta descriptions from simple structured text in metadata schemas to formal annotations using ontologies and the technologies for storing sharing and exploiting meta descriptions are also diverse and evolve rapidly In addition there is a proliferation of schemas and standards related to metadata resulting in a complex and moving technological landscape hence the need for specialized knowledge and skills in this area The Handbook of Metadata Semantics and Ontologies is intended as an authoritative reference for students practitioners and researchers serving as a roadmap for the variety of metadata schemas and ontologies available in a number of key domain areas including culture biology education healthcare engineering and library science **Web Technologies Research and**

Fundamentals of Information Systems

Interoperability Stefanie Rinderle-Ma,Jürgen Mangler,Daniel Ritter,2024-04-18 This book presents fundamental concepts and technologies to tackle interoperability between information systems It details interoperability at the data service and process level and combines theoretical foundations with hands on presentation of technologies to enable the development of sound and practical integration Chapter 1 details general interoperability challenges and describes the structure of the book To start with Chapter 2 presents technologies for the exchange of data between two selected and highly relevant data formats i e relational databases and XML Next Chapter 3 explains concepts for schema matching and mapping and data integration as well as the technological basis for implementing them based on query and transformation languages like XPath and XSLT Chapter 4 then turns to service interoperability and explains two related technologies REST and GraphQL in detail In Chapter 5 fundamentals for designing process orchestrations at the conceptual level are presented focusing on how to model process orchestrations and how to verify their correctness and soundness and showing BPMN as the de facto modeling standard Chapter 6 then details the concepts and languages for the implementation of process orchestrations including the presentation of execution languages for process orchestrations that are equipped with a formal semantics e g Workflow Nets the Refined Process Structure Tree and CPEE Trees Subsequently Chapter 7 focuses on the growing number of distributed loosely coupled and often non interoperable applications through the concepts of enterprise application integration and explains these by an implementation in CPN Tools and by two case studies Eventually Chapter 8 is lifting the orchestration and integration concepts and technologies to the choreography level by dealing with the interoperability between different process orchestrations Chapter 9 concludes the book by featuring success factors for interoperability projects It also provides a range of open research directions for interoperability such as compliance sensor fusion and blockchain technologies The book is mainly intended as a textbook to be used for developing and teaching courses on interoperability and integration To this end it is accompanied by a Web site with additional teaching materials It also spans a bridge from researchers to graduate students and practitioners by providing a deep understanding on practical interoperability challenges and solutions The focus here is put on de facto standards and open source systems and tools to enable interoperability solutions at low cost

XML and Web Technologies for Data Sciences with R Deborah Nolan,Duncan Temple Lang,2013-11-29 Web technologies are increasingly relevant to scientists working with data for both accessing data and creating rich dynamic and interactive displays The XML and JSON data formats are widely used in Web services regular Web pages and JavaScript code and visualization formats such as SVG and KML for Google Earth and Google Maps In addition scientists use HTTP and other network protocols to scrape data from Web pages access REST and SOAP Web Services and interact with NoSQL databases and text search applications This book provides a practical hands on introduction to these technologies including high level functions the authors have developed for data scientists It describes

strategies and approaches for extracting data from HTML XML and JSON formats and how to programmatically access data from the Web Along with these general skills the authors illustrate several applications that are relevant to data scientists such as reading and writing spreadsheet documents both locally and via Google Docs creating interactive and dynamic visualizations displaying spatial temporal displays with Google Earth and generating code from descriptions of data structures to read and write data These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies The book contains many examples and case studies that readers can use directly and adapt to their own work The authors have focused on the integration of these technologies with the R statistical computing environment However the ideas and skills presented here are more general and statisticians who use other computing environments will also find them relevant to their work Deborah Nolan is Professor of Statistics at University of California Berkeley Duncan Temple Lang is Associate Professor of Statistics at University of California Davis and has been a member of both the S and R development teams

Visualizing the Semantic Web Vladimir

Geroimenko, Chaomei Chen, 2006-07-01 The Web is undergoing revolutionary changes its second generation is emerging The key player in the new generation is not HTML but XML this is why it is also known as the XML based Web If the appearance of web pages is a major concern in the first generation then the meaning or semantics of information on the Web is the focus of the second generation which is why it is also called the Semantic Web The new edition of the pioneering monograph on Visualising the Semantic Web has undergone a number of changes in order to reflect recent research results web standards developments and trends In this new edition 2 chapters have been removed 4 new chapters have been added and the 10 remaining chapters have been completely revised and updated *Conceptual Modeling for New Information Systems Technologies*

Hiroshi Arisawa, Yahiko Kambayashi, 2003-08-06 The objective of the workshops associated with ER 2001 the 20th International Conference on Conceptual Modeling was to give participants the opportunity to present and discuss emerging hot topics thus adding new perspectives to conceptual modeling This the 20th ER conference the first of the 21st century was also the first one in Japan The conference was held on November 27-30 2001 at Yokohama National University with 192 participants from 31 countries ER 2001 encompasses the entire spectrum of conceptual modeling from theoretical aspects to implementations including fundamentals applications and software engineering In particular ER 2001 emphasized e business and reengineering To meet this objective we selected the following four topics and planned four international workshops International Workshop on Conceptual Modeling of Human Organizational Social Aspects of Manufacturing Activities HUMACS 2001 Manufacturing enterprises have to confront a host of demands The competitive climate enhanced by communication and knowledge sharing will require increasingly rapid responses to market forces Customer demands for higher quality better services and lower cost will force manufacturers to reach new levels of flexibility and adaptability Sophisticated customers will demand products customized to meet their needs Industries have so far sought to cope with these challenges primarily through advances in traditional capital by installing more powerful hardware and software technology Attention to the role of humans combined with organizational and social schemes in manufacturing has only been marginal The workshop HUMACS 2001 aimed to challenge the relevance of this last point **Understanding DB2**
