but controllable and useful As for radiation itself many introductions or textbooks have been published as in radiochemistry radiobiology and radiology In most of them the biological effects of radiation exposure are the main subjects which often enhance the feeling that radiation is dangerous and the effects produced by lower dose exposure that are difficult to see are hardly discussed The present volume mainly focuses on how radiation carries energy how energy is absorbed in substances as absorbed doses Gy or dose equivalents Sv how damages or risks appear with the absorbed dose and why the effects of the exposure appear quite differently depending on properties of the substances that were exposed **David Busch's Nikon**
