Curtin,2007-10-25 In the 1960s it became increasingly clear that more and more information was going to be stored on computers not on pieces of paper With these changes in technology and the ways it was used came a need to protect both the systems and the information For the next ten years encryption systems of varying strengths were developed but none proved to be rigorous enough In 1973 the NBS put out an open call for a new stronger encryption system that would become the new federal standard Several years later IBM responded with a system called Lucifer that came to simply be known as DES data encryption standard The strength of an encryption system is best measured by the attacks it is able to withstand and because DES was the federal standard many tried to test its limits It should also be noted that a number of cryptographers and computer scientists told the NSA that DES was not nearly strong enough and would be easily hacked Rogue hackers usually out to steal as much information as possible tried to break DES A number of white hat hackers also tested the system and reported on their successes Still others attacked DES because they believed it had outlived its effectiveness and was becoming increasingly vulnerable The sum total of these efforts to use all of the possible keys to break DES over time made for a brute force attack In 1996 the supposedly uncrackable DES was broken In this captivating and intriguing book Matt Curtin charts DES s rise and fall and chronicles the efforts of those who were determined to master it Leading With Care
