Hidden Markov Models For Bioinformatics:

Hidden Markov Models for Bioinformatics T. Koski, 2001-11-30 The purpose of this book is to give a thorough and systematic introduction to probabilistic modeling in bioinformatics The book contains a mathematically strict and extensive presentation of the kind of probabilistic models that have turned out to be useful in genome analysis Questions of parametric inference selection between model families and various architectures are treated Several examples are given of known architectures e g profile HMM used in genome analysis *Handbook of Hidden Markov Models in Bioinformatics* Martin Gollery, 2008-06-12 Demonstrating that many useful resources such as databases can benefit most bioinformatics projects the Handbook of Hidden Markov Models in Bioinformatics focuses on how to choose and use various methods and programs available for hidden Markov models HMMs The book begins with discussions on key HMM and related profile methods incl

Cutting-Edge Research Topics on Multiple Criteria Decision Making Yong Shi,Shouyang Wang,Yi Peng,Jianping Li,Yong Zeng,2009-07-09 MCDM 2009 the 20th International Conference on Multiple Criteria Decision Making emerged as a global forum dedicated to the sharing of original research results and practical development experiences among researchers and application developers from different multiple criteria decision making related areas such as multiple criteria decision aiding multiple criteria classification ranking and sorting multiple objective continuous and combinatorial optimization multiple objective metaheuristics multiple criteria decision making and preference modeling and fuzzy multiple criteria decision making The theme for MCDM 2009 was New State of MCDM in the 21st Century The conference seeks solutions to challenging problems facing the development of multiple criteria decision making and shapes future directions of research by promoting high quality novel and daring research findings With the MCDM conference these new challenges and tools can easily be shared with the multiple criteria decision making community The workshop program included nine workshops which focused on different topics in new

research challenges and initiatives of MCDM We received more than 350 submissions for all the workshops out of which 121 were accepted This includes 72 regular papers and 49 short papers We would like to thank all workshop organizers and the Program Committee for the excellent work in maintaining the conference's standing for high quality papers

Biological Modeling and Simulation Russell Schwartz, 2008-07-25 A practice oriented survey of techniques for computational modeling and simulation suitable for a broad range of biological problems There are many excellent computational biology resources now available for learning about methods that have been developed to address specific biological systems but comparatively little attention has been paid to training aspiring computational biologists to handle new and unanticipated problems This text is intended to fill that gap by teaching students how to reason about developing formal mathematical models of biological systems that are amenable to computational analysis It collects in one place a selection of broadly useful models, algorithms and theoretical analysis tools normally found scattered among many other disciplines It thereby gives the aspiring student a bag of tricks that will serve him or her well in modeling problems drawn from numerous subfields of biology These techniques are taught from the perspective of what the practitioner needs to know to use them effectively supplemented with references for further reading on more advanced use of each method covered The text which grew out of a class taught at Carnegie Mellon University covers models for optimization, simulation and sampling and parameter tuning These topics provide a general framework for learning how to formulate mathematical models of biological systems what techniques are available to work with these models and how to fit the models to particular systems Their application is illustrated by many examples drawn from a variety of biological disciplines and several extended case studies that show how the methods described have been applied to real problems in biology

Probabilistic Graphical Models for Genetics, Genomics, and Postgenomics Christine Sinoquet, Raphaël Mourad, 2014 At the crossroads between statistics and machine learning probabilistic graphical models (PGMs) provide a powerful formal framework to model complex data An expanding volume of biological data of various types, the so called omics, is in need of accurate and efficient methods for modelling and PGMs are expected to have a prominent role to play
