The Secret Doctrine: Anthropogenesis Helena Petrovna Blavatsky,1893 **The Secret Doctrine** Helena Petrovna Blavatsky,1925 Artificial Earth J Daniel Andersson,2023-10-24 Artificial Earth A Genealogy of Planetary Technicity offers an intellectual history of humanity as a geological force focusing on a prevalent contradiction in the Anthropocene discourse on global environmental change on the one hand it has been argued that there are hardly any pristine environments anymore to the degree that the concept of nature has lost its meaning while on the other that anthropogenic environmental change has become so prevailing that it ought to be conceived of as a force of nature in the literal sense of the expression Artificial Earth argues that to fully grasp the stakes of this discourse we need not only understand the contemporary scientific and technological transformations behind the Anthropocene but also explore the history of an ontological concern tied up with it In order to do so Artificial Earth examines reflections on the ontological dualism between nature and artifice within the history of earth science from the late eighteenth century onwards Paying particular attention to its consequences for how human subjectivity has been conceptualized in the Anthropocene it then enrolls these resources in an effort to problematize attempts since the 1980s to formalize earth science in systems theoretical terminology In sum the aim is to investigate the historical conditions for the possibility of conceiving human artifice as an integral part of the earth s terrestrial environment with the conviction that such an investigation may assist in resolving the aforementioned contradiction or at least to understand it better by tracing its historical lineage J Daniel Andersson is a post doctoral researcher at the Department for Thematic Studies Link ping University His research interests lie at the intersection between the technical cultures political imaginaries and historical processes that have shaped the ways in which the global environment has been understood and valued A general fascination with how concepts and discursive vocabularies become solidified in scientific modes of organization has consistently informed his theoretical and methodological approaches He has previously written about for instance the relationship between future orientation and valuation in integrated assessment models climate engineering as a sociotechnical imaginary and the intellectual history of risk management in global change science His writing has appeared in journals such as *Environment Planning Anthropocenes* and *Cosmos History* *A Message to All the Governments and People of Earth* William A. Redding,1896 The Secret Teachers of the Western World Gary Lachman,2015-12-08 Running alongside the mainstream of Western intellectual history there is another current which in a very real sense should take pride of place but which for the last few centuries has occupied a shadowy inferior position somewhere underground This

other stream forms the subject of Gary Lachman's epic history and analysis *The Secret Teachers of the Western World*. In this clarifying accessible and fascinating study the acclaimed historian explores the Western esoteric tradition a thought movement with ancient roots and modern expressions which in a broad sense regards the cosmos as a living spiritual meaningful being and humankind as having a unique obligation and responsibility in it. The historical roots of our counter tradition as Lachman explores have their beginning in Alexandria around the time of Christ. It was then that we find the first written accounts of the ancient tradition which had earlier been passed on orally. Here in this remarkable city filled with teachers philosophers and mystics from Egypt Greece Asia and other parts of the world in a multi cultural multi faith and pluralistic society a synthesis took place a creative blending of different ideas and visions which gave the hidden tradition the eclectic character it retains today. How Islam Shaped The Modern World Sayyid Rami Al Rifai, 2016-04-04 When the question is asked what are Islam's contributions to civilization often the focus is on scientific development to the ancient world this is by far the most misleading standard for advancement and development. While Islam was certainly the most advanced civilization of the ancient world its social and moral development is what set it apart from the rest of the world. Social and moral development in the ancient world had a far more significant impact on a society than scientific development although still important in many ways this is because ideology changes how the entire community behaved and lived their lives. Moral development drives social development because it defines the framework for how that society should live and spend its time and energy. Scientific development historically was a result of both of these because the backdrop in the ancient world for a society that did not develop socially and morally was either living as hunter gatherers or a nomadic life they either never advanced as a community or degraded after advancement as the moral fabric of that society disappeared the pyramids could not be built until the Egyptian religion and society demanded it which then directed man's scientific and engineering efforts. As the world at large moved away from this Islam was instrumental in shaping the development of the entire world as it shared its scientific discoveries from one end of the empire to the other it was a trade empire whose borders stretched from west Africa and southern Europe to China its scientific advancements which surpassed the rest of the world were a direct result of changing communities and societies around the world and encouraging them to study nature and the world this global effort would later spread around the world from Europe to Asia to the Americas. By only the 9th century for example muslim scientists had discovered the world was round and in comparison to Europe the masses

embraced the notion and took it for granted Ibn Hazm said its proof was that the Sun is always vertical to a particular spot on Earth meaning if you where to follow the sun to where you perceived it to be setting you would always find it vertical up in the sky to that location even though from your original location it may appear to be setting that notion dawned on Galileo 500 years later This book looks at what it is in Islam that encouraged this change in so many communities and it discusses the spirituality that shaped so many lives Some of these societies where among the most primitive people on earth but in a short period of time they would set up large empires spanning multiple continents this processes was seen numerous times in Islam s history in different regions of the earth by communities of different backgrounds From the Arab Ummayyids who first invaded Europe to the African Mali Empire whose most famous ruler was the richest person in History to the Turkish Ottomans who had one of the largest Empires on earth and one of the longest lasting family dynasties all had simple beginnings but one thing in common that changed their societies in a short period of time Islam
