Hidden Numbers:

*God's Hidden Creation Numbers** Charles D. Landis, 2008-07 This second volume of short stories continues to view man as the strangest of all creatures His actions are often dictated by reflex more often by needs and desires sometimes by well thought out plans and quite often by on the spot decisions Man often may seem the most irrational of all creatures and his deeds can make one wonder if he is as touted the highest form of life A man's thoughts are always more strange than his actions for thoughts have no physical or spiritual limits no set rules that must be followed no constraints that have to be obeyed and no fear of being discovered Within this small anthology of short stories you will have the opportunity to travel a variety of strange roads and meet an odd assortment of characters human and otherwise Some may disturb you some may frighten you some may even amuse you but they all will play with your mind to the degree that your imagination permits them to do so Trek through the jungle visit the quiet cemetery walk along the dark and lonely streets journey up the Alps travel those trails that lead to places that you will find on no map Give your imagination free rein and take hold of Angel Dark's hand and walk beside her But be careful Not everything is as it first appears and even someone as beautiful as Angel has her dark side

Once Upon A Number John Allen Paulos, 2008-08-04 What two things could be more different than numbers and stories Numbers are abstract certain and eternal but to most of us somewhat dry and bloodless Good stories are full of life they engage our emotions and have subtlety and nuance but they lack rigor and the truths they tell are elusive and subject to debate As ways of understanding the world around us numbers and stories seem almost completely incompatible Once Upon a Number shows that stories and numbers aren't as different as you might imagine and in fact they have surprising and fascinating connections The concepts of logic and probability both grew out of intuitive ideas about how certain situations would play out

Now logicians are inventing ways to deal with real world situations by mathematical means by acknowledging for instance that items that are mathematically interchangeable may not be interchangeable in a story And complexity theory looks at both number strings and narrative strings in remarkably similar terms Throughout renowned author John Paulos mixes numbers and narratives in his own delightful style Along with lucid accounts of cutting edge information theory we get hilarious anecdotes and jokes instructions for running a truly impressive pyramid scam a freewheeling conversation between Groucho Marx and Bertrand Russell while they re stuck in an elevator together explanations of why the statistical evidence against OJ Simpson was overwhelming beyond doubt and how the Unabomber s thinking shows signs of mathematical training and dozens of other treats This is another winner from America s favorite mathematician *Can Do Problem Solving Year 2 Teacher's Book* Cathy Atherden,2004 Can Do Problem solving is an innovative series which provides structured progression in teaching for Key Stage 1 and 2 ensuring that your pupils become successful problem solvers The materials for each year group consist of a Teacher s Book a Resources CD ROM and an Interactive Whiteboard CD ROM
