

Properties of Atomic Nuclei

- Nuclei have two properties:
 - Spin (conceptual, not literal)
 - Charge (property of protons)
- Nuclei are made of protons and neutrons
 - Both have spin values of $\frac{1}{2}$
 - Protons have charge
- Pairs of spins tend to cancel, so only atoms with an odd number of protons or neutrons have spin

A nucleus has the *NMR Property* if it has both angular momentum and a magnetic moment. Such nuclei have an odd number of protons or an odd number of neutrons.

High Angular Momentum Properties Of Nuclei:

High Angular Momentum Properties of Nuclei Noah R. Johnson, 1983 **Advances in Nuclear Physics** J.W. Negele, Erich W. Vogt, 2006-04-18 The four articles of the present volume address very different topics in nuclear physics and indeed encompass experiments at very different kinds of experimental facilities The range of interest of the articles extends from the nature of the substructure of the nucleon and the deuteron to the general properties of the nucleus including its phase transitions and its rich and unexpected quantal properties The first article by Fillipone and Ji reviews the present experimental and theoretical situation pertaining to our knowledge of the origin of the spin of the nucleon Until about 20 years ago the half integral spin of the neutron and proton was regarded as their intrinsic property as Dirac particles which were the basic building blocks of atomic nuclei Then with the advent of the Standard Model and of quarks as the basic building blocks the substructure of the nucleon became the subject of intense interest Initial nonrelativistic quark models assigned the origin of nucleon spin to the fundamental half integral spin of its three constituent quarks leaving no room for contributions to the spin from the gluons associated with the interacting quarks or from the orbital angular momentum of either gluons or quarks That naive understanding was shaken about fifteen years ago by experiments involving deep inelastic scattering of electrons or muons from nucleons
