Design Of High-speed Communication Circuits Ramesh Harjani, 2006-01-17 MOS technology has rapidly become the de facto standard for mixed signal integrated circuit design due to the high levels of integration possible as device geometries shrink to nanometer scales The reduction in feature size means that the number of transistor and clock speeds have increased significantly In fact current day microprocessors contain hundreds of millions of transistors operating at multiple gigahertz Furthermore this reduction in feature size also has a significant impact on mixed signal circuits Due to the higher levels of integration the majority of ASICs possesses some analog components It has now become nearly mandatory to integrate both analog and digital circuits on the same substrate due to cost and power constraints This book presents some of the newer problems and opportunities offered by the small device geometries and the high levels of integration that is now possible The aim of this book is to summarize some of the most critical aspects of high speed analog RF communications circuits Attention is focused on the impact of scaling substrate noise data converters RF and wireless communication circuits and wireline communication circuits including high speed I O

Mixed Design of Integrated Circuits and Systems Andrzej Napieralski, Zygmunt Ciota, Augustin Martinez, Gilbert De Mey, Joan Cabestany, 2012-12-06 Very fast advances in IC technologies have brought new challenges into the physical design of integrated systems The emphasis on system performance in lately developed applications requires timing and power constraints to be considered at each stage of physical design The size of ICs is decreasing continuously and the density of power dissipated in the circuits is growing rapidly The first challenge is the Information Technology where new materials devices telecommunication and multimedia facilities are developed The second one is the Biomedical Science and Biotechnology The utilisation of bloodless surgery is possible now because of wide micro sensors and micro actuators application Nowadays the modern micro systems can be implanted directly into the human body and the medicine can be applied right in the proper time and place in the patient body The low power devices are being developed particularly for medical and space applications This has created for designers in all scientific domains new possibilities which must be handed down to the future generations of designers In this spirit we organised the Fourth International Workshop MIXED DESIGN OF INTEGRATED CIRCUITS AND SYSTEMS in order

to provide an international forum for discussion and the exchange of information on education teaching experiences training and technology transfer in the area of microelectronics and microsystems
