Marvin Zelkowitz,2009-06-12 This is volume 72 of Advances in Computers a series that began back in 1960 and is the oldest continuing series chronicling the ever changing landscape of information technology Each year three volumes are produced which present approximately 20 chapters that describe the latest technology in the use of computers today In this volume 72 we present the current status in the development of a new generation of high performance computers The computer today has become ubiquitous with millions of machines being sold and discarded annually Powerful machines are produced for only a few hundred U S dollars and one of the problems faced by vendors of these machines is that due to the continuing adherence to Moore s law where the speed of such machines doubles about every 18 months we typically have more than enough computer power for our needs for word processing surfing the web or playing video games However the same cannot be said for applications that require large powerful machines Applications such as weather and climate prediction fluid flow for designing new airplanes or automobiles or nuclear plasma flow require as much computer power as we can provide and even that is not enough Today s machines operate at the teraflop level trillions of floating point operations per second and this book describes research into the petaflop region 1 015 FLOPS The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015 **Industrial Applications of High-Performance Computing**

Kelly, Wei Shu, Kurt Ferreira, John Van Dyke, Courtenay Vaughan, 2012-09-04 In this work the unique power measurement capabilities of the Cray XT architecture were exploited to gain an understanding of power and energy use and the effects of tuning both CPU and network bandwidth Modifications were made to deterministically halt cores when idle Additionally capabilities were added to alter operating P state At the application level an understanding of the power requirements of a range of important DOE NNSA production scientific computing applications running at large scale is gained by simultaneously collecting current and voltage measurements on the hosting nodes The effects of both CPU and network bandwidth tuning are examined and energy savings opportunities without impact on run time performance are demonstrated This research suggests that next generation large scale platforms should not only approach CPU frequency scaling differently but could also benefit from the capability to tune other platform components to achieve more energy efficient performance High-Performance Computing on Complex Environments Emmanuel Jeannot, Julius Zilinskas, 2014-06-03 With recent changes in multicore and general purpose computing on graphics processing units the way parallel computers are used and programmed has drastically changed It is important to provide a comprehensive study on how to use such machines written by specialists of the domain The book provides recent research results in high performance computing on complex environments information on how to efficiently exploit heterogeneous and hierarchical architectures and distributed systems detailed studies on the impact of applying heterogeneous computing practices to real problems and applications varying from remote sensing to tomography The content spans topics such as Numerical Analysis for Heterogeneous and Multicore Systems Optimization of Communication for High Performance Heterogeneous and Hierarchical Platforms Efficient Exploitation of Heterogeneous Architectures Hybrid CPU GPU and Distributed Systems Energy Awareness in High Performance Computing and Applications of Heterogeneous High Performance Computing Covers cutting edge research in HPC on complex environments following an international collaboration of members of the ComplexHPC Explains how to efficiently exploit heterogeneous and hierarchical architectures and distributed systems Twenty three chapters and over 100 illustrations cover domains such as numerical analysis communication and storage applications GPUs and accelerators and energy efficiency **The Federal High Performance Computing Program** , 1989 Big Data and High Performance Computing L. Grandinetti, G.R. Joubert, M. Kunze, 2015-10-20 Big Data has been much in the news in recent years and the advantages conferred by the collection and analysis of large datasets in fields such as marketing medicine and finance have led to claims that almost any real world problem could be solved if sufficient data were available This is of course a very simplistic view and the usefulness of collecting processing and storing large datasets must always be seen in terms of the communication processing and storage capabilities of the computing platforms available This book presents papers from the International Research Workshop Advanced High Performance Computing Systems held in

Cetraro Italy in July 2014 The papers selected for publication here discuss fundamental aspects of the definition of Big Data as well as considerations from practice where complex datasets are collected processed and stored The concepts problems methodologies and solutions presented are of much more general applicability than may be suggested by the particular application areas considered As a result the book will be of interest to all those whose work involves the processing of very large data sets exascale computing and the emerging fields of data science *High Performance Computing* David J.

Kuck,1996 Because hardware technology appears unable to provide continuing speed increases and because parallel architectures and software are not sufficiently developed to provide the practical solutions that have seemed tantalizingly close for some time computing as a whole is at a crossroads Even after more than a decade of commercial development no standard or widely accepted systems have emerged However this text defines practical parallelism tests and suggests how they can be passed by giving specific technical suggestions and outlining policy steps that should be taken Also suggested are methods for evolving better systems from those already in use and applying the definitions of what is needed as rules of selection **From Desktop to Teraflop** National Science Foundation (U.S.).
