Cultural Studies and Environmentalism Deborah J. Tippins,Michael P. Mueller,Michiel van Eijck,Jennifer D Adams,2010-08-05 As the first book to explore the confluence of three emerging yet critical fields of study this work sets an exacting standard The editors aim was to produce the most authoritative guide for ecojustice place based education and indigenous knowledge in education Aimed at a wide audience that includes but is not restricted to science educators and policymakers Cultural Studies and Environmentalism starts from the premise that schooling is a small part of the larger educational domain in which we live and learn Informed by this overarching notion the book opens up ways in which home grown talents narratives and knowledge can be developed and eco region awareness and global relationships can be facilitated Incorporating a diversity of

perspectives that include photography poetry and visual art the work provides a nuanced lens for evaluating educational problems and community conditions while protecting and conserving the most threatened and vulnerable narratives Editors and contributors share the view that the impending loss of these narratives should be discussed much more widely than is currently the case and that both teachers and children can take on some of the responsibility for their preservation The relevance of ecojustice to this process is clear Ecojustice philosophy is a way of learning about how we frame or perceive the world around us and why that matters Although it is not synonymous with social or environmental justice the priorities of ecojustice span the globe in the same way It incorporates a deep recognition of the appropriateness and significance of learning from place based experiences and indigenous knowledge systems rather than depending on some urgent ecological crises to advocate for school and societal change With a multiplicity of diverse voices coming together to explore its key themes this book is an important starting point for educators in many arenas It brings into better focus a vital role for the Earth s ecosystems in the context of ecosociocultural theory and participatory democracy alike Encompassing theoretical empirical and experiential standpoints concerning place based knowledge systems this unique book argues for a transformation of science education s intellectual tradition of thinking that emphasizes individual cognition In its place the book offers a wisdom tradition of thinking living and being that emphasizes community survival in harmony within itself and with Mother Earth Glen Aikenhead *Education is Not Rocket Science* David B. Zandvliet, 2006-01-01 The dominance of computer labs in our schools is the result of a long struggle among teachers and technicians for control of precious computer resources As technicians gain power and influence this is expressed in the row on row of machines installed in literally thousands of computer labs in schools around the world While labs are in some ways ideal for learning about technology or computer programming they somehow seem ill equipped to assist teachers with a lesson on language arts geography or for helping students conduct a scientific experiment As a result the huge investment in computers seems like so much wasted potential labs are not influencing teaching in the ways we had hoped for and in fact their use may even be harmful to students These observations are based on five years of experience as the director of a centre for educational technology at a leading Canadian university and on the results of three international studies I conducted in Australia Canada and Malaysia A reversal of the current techno trend would mean teachers would reclaim computers for their own classrooms and relegate the idea of the computer lab to the scrap heap of history As educators we need to discard the once size fits all strategy which computer labs imply about teachers instructional needs This is reinforced by the apparent failure of computers to transform teachers practice despite significant investments in computer technologies Some critics describe this as a management problem as computer labs reinforce top down ways of thinking about knowledge Unfortunately once such models are adopted undesirable uses of technology such as the computer lab become entrenched in a bureaucratic mindset limiting the effectiveness of these expensive tools to support teaching and learning *Technology-rich Learning Environments: A Future*

Perspective Myint Swe Khine, Darrell Fisher, 2003-08-27 The proliferation of information and communication technology tools in recent years has led many educators to revise the way they teach and structure their learning environments The growth of technology applications in teaching and training is not only gaining momentum it is becoming a significant part of today's educational scene This book presents research and case studies to explain how these technology rich learning environments can be structured and positive results can be achieved The authors based on their extensive research data present the pedagogical and organizational implications of technology rich learning environments and more importantly they provide practical models ideas and exemplars for educators to actualize the full potential of technology in the future **Technology and Information Services** Carol L. Anderson, Robert Hauptman, 1993 This handbook provides helpful guidance for the information services practitioner and manager It contains a wealth of concrete information necessary for managing technology and its applications and for providing technological leadership Although there are a plethora of monographs allocated to general and specific aspects of automation computerization and technological innovation in libraries and information centers this volume is unique in offering a conceptual framework for implementing and managing technologies plus a detailed discussion of technologies in relation to both the needs of information seekers and the changes they have wrought in delivering services to users The volume will also be of interest to students because it provides a historical context for recent changes brought about by technological applications describes current practices and explores issues and trends on the horizon **Urban Planning And Real Estate Development**, **Environment and Planning**, 2003 Publishes interdisciplinary research on issues of Government and Policy with an international perspective Committed to a broad range of policy questions not just those related to government and public policy Topics covered include nonstate agents private public collaboration and NGOs nongovernmental organisations All areas of economic social and environmental institutions and policy are included Disciplines from which papers are derived include political science planning geography economics law sociology and public administration **Innovative Approaches to Education for Sustainable Development** Walter Leal Filho, Mario Salomone, 2006 Innovative Approaches to Education for Sustainable Development Environmental Education Communication and Sustainability **Urban Planning And Real Estate Development** John Ratcliffe, Michael Stubbs, 2003-09-02 This text brings together urban planning and real estate development It should be useful to students of real estate studies estate management land management land economy and general practice surveying **Information Technology Management** Michel Paquin, Canadian Workplace Automation Research Centre. Organizational Research Directorate, 1990 The purpose of this study was to survey the various approaches to the management of information technologies described in the literature and develop an integrated approach A general description of the integrated approach is provided for managers at the planning implementation and evaluation levels Sections of the report include steps in the information technology management process strategic planning at the corporate and information technology levels project

planning needs assessment options study and design implementation and evaluation **New Technical Books** New York
Public Library,1989 **The Effects of Organizational Workplace Dynamics and Building Infrastructure Flexibility
on Environmental and Technical Quality in Offices** Kung-Jen Tu,1997
