Theoretical Perspectives on Cognitive Aging Timothy A. Salthouse, 2016-03-23 The phenomenon of age related cognitive decline has long been controversial both in terms of mere existence and with respect to how it is explained Some researchers have dismissed it as an artifact of declining health or lower levels of education and others have attributed it to general changes occurring in the external environment Still other interpretations have been based on the use it or lose it principle known as the Disuse Hypothesis or on the idea that there are qualitative differences in either the structure or the process of cognition across the adult years Perhaps the most popular approach at present relies on the information processing perspective and attempts to identify the critical processing component most responsible for age related differences in cognition The primary purposes of this book are first to review the evidence of age related differences in cognitive functioning and then to evaluate the major explanations proposed to account for the negative relations between age and cognition that have been established Included is a discussion of theoretical dimensions and levels of scientific theorizing assumed to be helpful in understanding and evaluating alternative perspectives on cognitive aging The various perspectives are then covered in detail and analyzed The text concludes with observations about the progress that has been made in explaining cognitive aging phenomena plus recommendations for research practices that might contribute to greater progress in the future

Reading Research Into the Year 2000 Anne P. Sweet,Judith I. Anderson,2013-12-16 Through the years research on reading has made enormous contributions to helping us understand how students learn to read and how teachers can best instruct them Research continues to add to our fundamental knowledge of reading in significant ways thus adding more pieces to the puzzle for example finding answers to how students learn content in other school subjects through reading and what strategies teachers can use to help their students do this more effectively *Reading Research into the Year 2000* describes the dynamic process that the Department of Education engages in to plan and execute a reading research agenda It was written to inform a wide ranging public those who will benefit directly or indirectly from reading research findings including those who use research applications as well as those who conduct the research Moreover it was written to make public the process of establishing a national R D Center Few people outside the Department of Education are aware of the procedures that are undertaken The editors believe that if more people are in the know they will be more likely to participate in the entire process from generating research ideas to submitting applications and that this greater participation is essential if we are to garner divergent thinking about how to solve critical education research issues They have made a significant step toward breaking down barriers to full participation and paved the way for greater involvement of non traditional players in competing for a national R D Center award

Goal Concepts in Personality and Social Psychology Lawrence A. Pervin, 2015-06-19. Is behavior motivated? And if so, can it be motivated by the anticipation of future events? What role does cognition play in such motivational processes? And further, what role does motivation play in ongoing cognitive activity?
