Tanner,2012-12-06 Springs and Bottled Waters of the World provides information for the general public legal and scientific professionals and governmental scientists about springs mineral water and thermal waters used for municipal industrial and agricultural water supplies as well as for the rapidly expanding bottled water industry The role of springs is described for ancient civilizations military campaigns and in more recent times for tourism and health spas of the world In addition their source occurrence and methods for development and use are described In the preparation of this book data were obtained from major hydrogeologic data bases and from leading hydrogeologists      **The Herd Register of the American Guernsey Cattle Club** ,1929

*Karst Hydrology* Ognjen Bonacci,2012-12-06 Karst is characterized particularly by special landforms and sub surface drainage The various actions of water result in numerous variations of surface and sub surface karst forms They also bring about distinctive geologic morphologic forms and more striking ly specific flora and fauna The scientific discipline of hydrology although a long established science cannot easily be applied to karst regions with their very complex drainage system A special approach is therefore necessary to understand and predict water circulation in these areas This is the viewpoint we must adopt if hydrology is to solve the complex problems of karst phenomena This book can be seen as the appeal of a hydrologist to experts from different scientific dis ciplines geology hydrology geomorphology geography geo physics meteorology ecology civil engineering forestry agricul ture etc to collaborate towards a better understanding of karst areas Evidently karst phenomena have not been sufficiently and carefully studied worldwide It is equally true that the first theories on water circulation in karst were developed according to ex periences in the Dinaric karst This can easily be explained In habitants in those areas had no place to which to escape as was the case in other countries      **Knowledge as a Feeling** Troy A. Swanson,2023-05-08 Much of information science theory assumes a type of rationality in how individuals process the world around them but the impact of misinformation and disinformation along with the polarization of society into competing information factions calls for new understandings around our relationships to information Advances in neuroscience and psychology shed new light on how the brain processes information using both conscious and unconscious systems Current theory in neuroscience emphasizes that the mind is not a unified whole but a network of networks

constructing reality to anticipate needs Knowledge is not a rational process but centers around the feeling of knowing which is the net output of competing brain processes The feeling of knowing assumes a group context and offers a social epistemological stance that judges knowledge within this group context With knowledge built into groups power dynamics allow work to be accomplished but also privilege some group members over others The feeling of knowing has significant implications for information science challenging theoreticians and practitioners to reconsider how individuals process information For information behavior the feeling of knowing offers a fuller picture looking at conscious and unconscious processing in the production of knowledge For information literacy the feeling of knowing sheds light on how individuals evaluate information and synthesize new sources into their existing knowledge Ultimately the feeling of knowing leads us toward new reflective and metacognitive tools that help meet this moment in the evolution of our information ecosystem This book explores the idea that knowing is a feeling that results from the interactions of the brain's unconscious and conscious processes and not through the accumulation of facts It's intended to help librarians educators and information scientists better understand what neuroscience and psychology are teaching about what it means to know and how our brain learns
