High Energy Particles And Quanta In Astrophysics:

High-Energy Particles and Quanta in Astrophysics Carl E. Fichtel, 1974 For many centuries the study of astronomy was restricted largely to the equilibrium effects associated with Newtonian gravitation and thermal electromagnetic radiation in the visible band But there is more to astronomy than meets the eye more in the heavens than was dreamed of in the older cosmologies High energy astrophysics represents a new era and area of astronomy concerned with a wide range of phenomena that are invisible to the human eye It deals with the observation and interpretation of charged cosmic rays and electromagnetic cosmic radiation in the gamma ray x ray and radio bands It encompasses the suprathreshold equilibrium phenomena such as the flux of cosmic rays that are an important everyday aspect of astronomical space the problems of quasi equilibrium including galactic dynamics the interstellar gas and star formation and the domain of nonequilibrium phenomena sometimes explosive such as stellar explosions and solar flares It ranges from the sun through the galactic and extragalactic and local supergalactic to the metagalaxy And most of what is presently known about these phenomena and these regions is reviewed within the covers of this book The editors of this volume and their fellow authors are associated with the Laboratory for High Energy Astrophysics at NASA's Goddard Space Flight Center and have aided in the design of NASA's rich experimental program in these areas which includes an ongoing data collection effort via balloon rocket and satellite soon to be joined by a series of High Energy Astrophysical Observatories which are the largest unmanned research satellites now under development The topics treated in the ten chapters are galactic cosmic ray observations the origin and interstellar propagation of cosmic rays the interstellar propagation of nuclei and source composition cosmic electrons solar modulation and the earth's field solar particles radio astronomy discrete x ray sources the cosmic x ray background and gamma ray astronomy

Nuclear Science Abstracts, 1976 **Nuclear Science Abstracts**, 1972-04 *NASA Technical Memorandum*, 1976 **Astrophysical Formulae** Kenneth R. Lang, 2013-06-29 This second edition contains corrections of misprints and errors found by the author as well as those suggested during the Russian translation of the first printing The Russian editors and translators who kindly supplied this material include V E CHERTOPRUD A G DOROSHKEVICH V L HOHLOVA M Yu KHLOPOV D K NADIOZHIN L M ZERNOI I G PERSIANTSEV L A POKROVSKII A V ZASOV and Yu K ZEMTSOV Supplemental references for the period 1974 to 1980 have also been added as appendix where they are included under the headings of general references and specific references for each chapter Although specialized references come mainly from American journals references to reviews and books are also included to help guide the reader to other sources The author encourages suggestions for additions and corrections to possible future editions of this volume KENNETH R LANG Department of Physics Tufts University Medford Massachusetts January 1980 Preface This book is meant to be a reference source for the fundamental formulae of astrophysics Wherever possible the original source of the material being presented is referenced together with references to more recent modifications and applications More accessible reprints and

translations of the early papers are also referenced In this way the reader is provided with the often ignored his torical context together with an orientation to the more recent literature NASA Conference Publication ,1977 International Aerospace Abstracts ,1994 *Gamma-ray Astronomy* P. V. Ramana Murthy,A. W. Wolfendale,1993-04 The recent launch of NASA s Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy **X-Ray Astronomy** G. Giacconi,G. Setti,2012-12-06 This volume contains a series of lectures presented at the 5th Course of the International School of Astrophysics held in Erice Sicily from July 1st to July 14 1979 at the E Majorana Centre for Scientific Culture The course was fully supported by a grant from the NATO Advanced Institute Programme It was attended by about one hundred participants from ten countries Since the discovery of the first extra solar X ray source in the early 1960 s X ray astronomy has played an increasingly important role in the study of the Universe bringing new insight to almost every field of modern astrophysics from stellar evolution to cosmology Generally speaking this branch of astronomy is concerned with the discovery classification and study of hot matter in the universe including high energy non thermal pheno mena In particular X ray observations appear to provide the main if not the only probe to inspect regions where collapsed objects are formed such as the environment of neutron stars and of black holes in the presence of matter accretion onto the objects themselves It is significant that the first candidate black hole Cyg X I has been primarily singled out by its X ray emission In the same context it is well known that one of the fundamental problems in modern astrophysics is the understanding of the strong activity taking place in galactic nuclei *Literature 1974, Part 2* S. Böhme,U. Esser,W. Fricke,U. Güntzel-Lingner,F. Henn,D. Krahn,H. Scholl,G. Zech,2013-11-11 *Astronomy and Astrophysics Abstracts* which has appeared in semi annual volumes since 1969 is de voted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals com pared to which

our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 12 contains literature published in 1974 and received before March 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with volume 11 some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy

Physics of Stellar Evolution and Cosmology Howard S. Goldberg, Michael D. Scadron, 1982 *American Journal of Physics*, 1975 INIS Atomindex, 1985 *Status and Prospects of Astronomy in Germany 2003-2016* Deutsche Forschungsgemeinschaft (DFG), 2009-01-28 This white paper identifies the main issues and major recommendations for German astronomical research Their implementation will require initiative from all partners and will allow German astronomers and astrophysicists to continuously play a leading role in their field

Exploration of Halley's Comet Michael Grewing, Francoise Praderie, Rüdiger Reinhard, 2012-12-06 The 1985 86 apparition of Halley's Comet turned out to be the most important apparition of a comet ever It provided a worldwide science community with a wealth of exciting new discoveries the most remarkable of which was undoubtedly the first image of a cometary nucleus Halley's Comet is the brightest periodic comet and the most famous of the 750 known comets With its 76 year period its recent appearance was truly a once in a lifetime observational opportunity The 1985 86 apparition was the thirtieth consecutive recorded apparition Five apparitions ago the English astronomer Edmond Halley discovered the periodicity of his comet and correctly predicted its return in 1758 a triumph for science best appreciated in the context of contemporary views or rather fears about comets at that time The increasingly rapid progress in technological development is very much apparent when one compares the dominant tools for cometary research during Halley's next three apparitions in 1835 studies were made based on drawings of the comet in 1910 photographic plates were used while in March 1986 an armada of six spacecraft from four space agencies approached the comet and carried out in situ measurements 1 AU from the Earth In 1910 nobody could have dreamed that this was possible and today it is equally difficult to anticipate what scientists will be able to achieve in 2061
