traditional course of study in high school mathematics needs to be completely reconstructed Five years of intensive investigation have established striking inadequacies in the first year course both what we teach and how we teach it First more than half of the conventional first year course will never be used by the vast majority of our pupils Second the claims which we make that we are training pupils to think intelligently will be difficult if not impossible to substantiate The very content and organization of the course tends to inhibit this Most of it provides little or no opportunity for training in problem solving Our courses of study emphasize habit formation and rote memory and these courses are almost exactly determined by the textbook Finally standardized tests given to more than 100 high schools show clearly that neither in securing formal skill nor in developing powers of analytical thinking is our instruction satisfactory Striking needs 1 courses of study based on a clear cut program 2 a real psychology of how children learn mathematics expressed through new types of wordy textbooks and manuals of method Courses must be constructed on principles of social worth and thinking outcomes that have been definitely established Current courses have not been so organized The slate should be wiped clean and a new course organized on a clear cut program No material should be included which cannot be defended either on the basis of social worth or upon the probability of relatively worth while thought power About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Invigorating High School Math Steven Leinwand, Eric Milou, 2021-08-31 Dramatically Improving High School Mathematics Must Start Now High school math is failing many students Out of date and stale curricula are not only dull but perpetuate inequity by limiting opportunities and failing to prepare a majority of students for life in the 21st century Even traditionalists recognize that the status quo is no longer acceptable Major shifts in course organization mathematical content pedagogy and assessment are long overdue Practical Guidance for Meaningful

Transformation Invigorating High School Math is a clarion call for meaningful transformation Throughout the book Steven Leinwand and Eric Milou address the most critical challenges facing high school mathematics and provide practical guidance for addressing challenges and excuses that often short circuit new approaches making the case for the importance of and rationale for changing high school math creating core integrated math courses for grades 9 and 10 and coherent pathways for grades 11 and 12 making critical shifts in pedagogy and classroom practice designing high quality assessments and using them effectively developing and executing a rational implementation plan A Stimulus for Discussion and a Road Map for Change Many of these ideas will not be broadly popular It s likely that none of them will be easy to implement That s no surprise For nearly a century the basic structure of high school mathematics has barely changed not because of its effectiveness but because the status quo is a powerful force requiring purposeful action to break This book was written for every high school math educator and leader as both a stimulus for discussion and a road map for change Our hope say the authors is that this book stimulates change empowers teachers and guides the profession on this critical journey to invigorate high school mathematics
